Discourse Comprehension Essays In Honor Of Walter Kintsch:

Discourse Comprehension Charles A. Weaver, III, Suzanne Mannes, C. Randy Fletcher, 2012-12-06 This volume is derived from presentations given at a conference hosted in Boulder Colorado in honor of the 60th birthday of Walter Kintsch. Though the contents of the talks and thus the chapters varied widely all had one thing in common they were inspired to some degree by the work of Walter Kintsch. When making plans for an edited book centered around this conference the editors had a primary goal to acknowledge the wide variety of researchers and research areas Kintsch had influenced. As a consequence one of the more unusual elements of this volume is the diversity of the contributors. Researchers from six different countries contributed chapters to this book which is loosely organized around three main thrusts of Kintsch's work: text-based representations that explain how meaning in a text is constructed, situation models which represent what the text is about rather than what a text literally says, and the construction integration model. Kintsch's most recent work in discourse comprehension.

Discourse Comprehension Charles A. Weaver (III), Suzanne Mannes, Charles R. Fletcher, 1995 **The Construction of Mental Representations During Reading** Herre van Oostendorp, Susan R. Goldman, 1998-11 This volume presents in depth investigations of the processes of meaning making during reading at both local discourse and global general knowledge levels. It will be of theoretical and practical interest to cognitive scientists, reading researchers,

Metaphor and Philosophy Mark Johnson, 2014-06-23 During the last 15 years cognitive scientists have discovered things about the nature and importance of metaphor that are startling because of their radical implications for metaphor research and because they require us to rethink some of our most fundamental received notions of meaning, concepts, and reason. Many of the theoretical assumptions that guided earlier generations who worked on metaphor have been undermined by this new research which has profound implications for philosophy. More specifically, the level of methodological sophistication of empirical studies of metaphor has increased markedly, making possible rigorous, detailed analyses of how metaphors actually structure conceptualization and reasoning. In addition, professionals have learned that metaphor is not merely a linguistic phenomenon but more fundamentally a conceptual and experiential process that structures the world. The articles in this special issue make significant contributions to these advances.

Handbook of Psychology, Experimental Psychology Alice F. Healy, Robert W. Proctor, 2003-03-11 Includes established theories and cutting edge developments. Presents the work of an international group of experts. Presents the nature, origin, implications, and future course of major unresolved issues in the area.

Understanding Language Understanding Ashwin Ram, Kenneth Moorman, 1999 This book highlights cutting edge research relevant to the building of a computational model of reading comprehension as in the processing and understanding of a natural language text or story. The book takes an interdisciplinary approach to the study of reading with contributions from computer science, psychology, and philosophy. Contributors cover the theoretical and psychological foundations of the research in discussions of what it means to understand a text, how one builds a computational model, and related issues in

knowledge representation and reasoning The book also addresses some of the broader issues that a natural language system must deal with such as reading in context linguistic novelty and information extraction

Constructive Knowledge

Acquisition Franz Schmalhofer, 2019-01-04 A cognitive psychology which becomes increasingly specialized requires a special effort in order to avoid a fragmentation into several controversial issues that are independently discussed but also inherently related Rather than asking additional differentiated questions which are then investigated by more specialized experimental methods and designs this book promotes unified theories and a levels approach for their experimental evaluation Within this cognitive science approach and on the basis of the most foundational assumptions of Kintsch's construction integration theory a computational theory of knowledge acquisition is then developed and subsequently evaluated by psychological experiments For forty years computer simulation techniques and experimental psychology research have greatly matured the understanding of human knowledge and its acquisition in different learning environments This volume critically assesses the advantages and limitations of these approaches and then develops an integrated research methodology It goes on to provide significant progress concerning the following questions What are the most promising research methodologies for investigating human cognition How can the experimental psychology research on text comprehension concept formation and memory become more closely related to one another when the very specialized research paradigms and the highly specific scientific controversies promote their separation and independent discussion How can a general comprehension based theory bridge the gap between simple experimental settings and the real life situations that occur in education and work environments This book demonstrates how experimental psychology can proceed more successfully by investigating those aspects that are shared among different areas of research like text comprehension categorization and learning by exploration It also shows how unified theories can assist in applying experimental psychology and cognitive science results to areas such as intelligent tutoring systems instructional design and the development of expert systems in complex real world domains

Discourse and Power Teun A van Dijk, 2008-06 Teun van Dijk is one of the founders of Critical Discourse Studies and this collection brings together some of his most important writing framed by new introductory material He examines the role of discourse in the reproduction of power and domination in society and the ways in which media and political elites control access to public discourse

Co-construction Sally Jacoby, Elinor Ochs, 1995 This special issue brings together a set of papers that address the import of co construction in the constitution and interpretation of culturally and historically situated social interactions In this volume co construction is referred to as the joint creation of a form interpretation stance action activity identity institution skill ideology emotion or other culturally meaningful reality The co prefix is intended to cover a range of interactional processes including collaboration cooperation and coordination The articles raise three important methodological and intellectual issues for the study of language discourse and social interaction The obvious importance of capturing the linguistic paralinguistic and nonlinguistic events of interaction and of having a principled way of incorporating them into a sequential analysis of what appears to be going on from the participants point of view in a particular sociocultural setting The challenge of treating spontaneously produced discourse not as free standing text however it may look when transcribed or isolated from larger stretches of talk and interaction but as something contingently dynamic and unfolding in interactional time To study language behavior discourse and social interaction is to study communicative competence not as an abstract construct or a model but as it plays out in all its incredible complexity as people go about managing their identities their relationships and their lives The editors are pleased that this cross disciplinary group of researchers has come together to consider co construction in naturally occurring discourse in a variety of settings and cultural contexts
