

# Our Solar System – Discovering Size

You will need a 8.5 by 14 or legal sized piece of paper, a pencil with mm, a pair of compass and a calculator for this activity. When drawing the planets, make sure you label them for reference.

The sun is the largest object in our solar system. It has a whopping diameter of 1,391,400 km making it approximately 109 times wider than Earth. What is the approximate diameter of planet Earth?

\_\_\_\_\_

To understand the relative sizes of the planets in our solar system, we're going to create scale drawings of each planet. Let's scale down the size of the sun and let it have a diameter of 282 cm. Can you imagine how wide that is? What scale have we used?

1 cm : \_\_\_\_\_ km

Using the same scale, how big would Earth be? Give your answer to the nearest mm.

\_\_\_\_\_

Draw earth on your piece of paper.

Now we'll keep travelling further away from the sun, discovering the diameter of each planet and comparing them using the scale of 282 cm : 1391400 km

Mercury is the smallest planet in our solar system and also the closest to the sun. On your scale drawing Mercury will be just under 1 cm at 0.9889 cm. What is the diameter of Mercury in real life? Give your answer to the nearest km.

\_\_\_\_\_

Add a drawing of mercury to your piece of paper.

Our moon is in the earth's orbit. The diameter of the moon is 3475 km. Draw the moon on your piece of paper. What is the diameter of our moon on your scale drawing? Give your answer to the nearest mm.

\_\_\_\_\_

Venus is up next. Venus is the planet that is closest to earth in size and distance. With a diameter of 12104 km. How big will you need to draw Venus?

\_\_\_\_\_

Don't forget to add Venus to your scale drawings.

Mars is almost half the size of Earth with a diameter of 6792 km. Find the diameter of Mars needed to add to your scale drawings and then draw it on your sheet. Give your answer to the nearest mm.

\_\_\_\_\_ cm

At this point you might be wondering why you needed an 8.5 by 14 or legal sized piece of paper as all the planets we've encountered so far are relatively small in comparison to our sun! Jupiter is huge with a diameter of 142984 km. This is the same as travelling from London to New York by plane over 25 times! How many Earths would fit inside Jupiter?

\_\_\_\_\_

Will Jupiter fit on your page? How big do you need to draw it? Give your answer to the nearest mm.

\_\_\_\_\_ cm

The last planet left to discover is Neptune. Neptune's diameter is 1786 km less than Uranus'. Work out the scale drawing diameter of Neptune and add it too your page.

\_\_\_\_\_ cm

Uranus is the third biggest planet in our solar system but with a diameter of 10.4 cm according to our scale it is almost a third of the size of Jupiter. Draw a scale drawing of Uranus and then calculate its real life diameter.

\_\_\_\_\_ km

Saturn is the second biggest planet in our solar system. To add it your scale drawings it needs a diameter of 244 mm. Add it first and then calculate the real life diameter of Saturn.

\_\_\_\_\_ km
