Aspects of Automatic Text Analysis Alexander Mehler,Reinhard Köhler,2007-06-24 The significance of natural language texts as the prime information structure for the management and dissemination of knowledge is as the rise of the web shows still increasing Making relevant texts available in different contexts is of primary importance for efficient task completion in academic and industrial settings Meeting this demand requires automatic form and content based processing of texts which enables to reconstruct or even to explore the dynamic relationship of language system text event and context type The rise of new application areas disciplines and methods e g text and web mining testify to the importance of this task Moreover the growing area of new media demands the further development of methods of text analysis with respect to their computational linguistic information theoretical and mathematical underpinning This book contributes to this task It collects contributions of authors from a multidisciplinary area who focus on the topic of automatic text analysis from several i e linguistic mathematical and information theoretical perspectives It describes methodological as well as methodical foundations and collects approaches in the field of text and corpus linguistics In this sense it contributes to the computational linguistic and information theoretical grounding of automatic text analysis

Perception-based Data Mining and Decision Making in Economics and Finance Ildar Batyrshin,Leonid Sheremetov,Lofti A. Zadeh,2007-04-05 The primary goal of this book is to present to the scientific and management communities a selection of applications using more recent Soft Computing SC and Computing with Words and Perceptions CWP models and techniques meant to solve the economics and financial problems The selected examples could also serve as a starting point or as an opening out in the SC and CWP techniques application to a wider range of problems in economics and finance Decision making in the present world is becoming more and more sophisticated time consuming and difficult for human beings who require more and more computational support This book addresses the significant increase on research and applications of Soft Computing and Computing with Words and Perceptions for decision making in Economics and Finance in recent years Decision making is heavily based on information and knowledge usually extracted from the analysis of large amounts of data Data mining techniques enabled with the capability to integrate human experience could be used for a more realistic business decision support Computing with Words and Perceptions introduced by Lotfi Zadeh can serve as a basis for such extension of traditional data mining and decision making systems Fuzzy logic as a main constituent of CWP gives powerful tools for modeling and processing linguistic
