 Army moved to increase the cap on recruiting bonuses from its current maximum of 20k to 40K To understand the personnel
 management implications of raising the bonus cap the current study estimated its projected impact on Army accessions
 specifically applicants job training and term of service TOS choices Using an empirically based Job Choice Model JCM based
 on actual applicant choice data taken from REQUEST transactions for the first quarter of FY 2005 n 18 803 we estimated the
 model and then simulated applicants MOS TOS choices under the existing bonus cap of 20k and a raised bonus cap of 40K
 Results of our simulations indicated that the raised bonus cap could increase accessions particularly among higher quality
 applicants to higher priority MOS about 8 10% on average and to longer TOS by roughly 12 17% At the same time however
 accessions to lower priority MOS are projected to drop about 2% For Army personnel policy researchers the methodology
 estimates and results of the Job Choice Modeling JCM could be used in future efforts to model the impact of bonus policy on
