Discrete Multivariate Analysis Ivonne M. M. Bishop, 1988 Discrete Multivariate Analysis Yvonne M. M. Bishop, Stephen E. Fienberg, W. Paul Holland, 1984 *Discrete multivariate analysis* Yvonne M. M. Bishop, Stephen E. Fienberg, Paul W. Holland, Richard J. Light, Frederick Mosteller, 1980 Signal Detection Theory and ROC Analysis in Psychology and Diagnostics John A. Swets, 2014-02-25 Signal detection theory as developed in electrical engineering and based on statistical decision theory was first applied to human sensory discrimination 40 years ago The theoretical intent was to provide a valid model of the discrimination process the methodological intent was to provide reliable measures of discrimination acuity in specific sensory tasks An analytic method of detection theory called the relative operating characteristic ROC can isolate the effect of the placement of the decision criterion which may be variable and idiosyncratic so that a pure measure of intrinsic discrimination acuity is obtained For the past 20 years ROC analysis has also been used to measure the discrimination acuity or inherent accuracy of a broad range of practical diagnostic systems It was widely adopted by methodologists in the field of information retrieval is increasingly used in weather forecasting and is the generally preferred method in clinical medicine primarily in radiology This book attends to both themes ROC analysis in the psychology laboratory and in practical diagnostic settings and to their essential unity The focus of this book is on detection and recognition as fundamental tasks that underlie most complex behaviors As defined here they serve to distinguish between two alternative confusable stimulus categories which may be perceptual or cognitive categories in the psychology laboratory or different states of the world in practical diagnostic tasks This book on signal detection theory in psychology was

written by one of the developers of the theory who co authored with D M Green the classic work published in this area in 1966 reprinted in 1974 and 1988 This volume reviews the history of the theory in engineering statistics and psychology leading to the separate measurement of the two independent factors in all discrimination tasks discrimination acuity and decision criterion It extends the previous book to show how in several areas of psychology in vigilance and memory what had been thought to be discrimination effects were in reality effects of a changing criterion The book shows that data plotted in terms of the relative operating characteristic have essentially the same form across the wide range of discrimination tasks in psychology It develops the implications of this ROC form for measures of discrimination acuity pointing up the valid ones and identifying several common but invalid ones The area under the binormal ROC is seen to be supported by the data the popular measures d and percent correct are not An appendix describes the best current programs for fitting ROCs and estimating their parameters indices and standard errors The application of ROC analysis to diagnostic tasks is also described Diagnostic accuracy in a wide range of tasks can be expressed in terms of the ROC area index Choosing the appropriate decision criterion for a given diagnostic setting rather than considering some single criterion to be natural and fixed has a major impact on the efficacy of a diagnostic process or system Illustrated here by separate chapters are diagnostic systems in radiology information retrieval aptitude testing survey research and environments in which imminent dangerous conditions must be detected Data from weather forecasting blood testing and polygraph lie detection are also reported One of these chapters describes a general approach to enhancing the accuracy of diagnostic systems DHHS Publication No. (PHS).,1989 Statistical Inference Ayanendranath Basu,Hiroyuki Shioya,Chanseok Park,2011-06-22 In many ways estimation by an appropriate minimum distance method is one of the most natural ideas in statistics However there are many different ways of constructing an appropriate distance between the data and the model the scope of study referred to by Minimum Distance Estimation is literally huge Filling a statistical resource gap Stati Remote Sensing Handbook - Three Volume Set Prasad Thenkabail,2018-10-03 A volume in the three volume Remote Sensing Handbook series Remote Sensing of Water Resources Disasters and Urban Studies documents the scientific and methodological advances that have taken place during the last 50 years The other two volumes in the series are Remotely Sensed Data Characterization Classification and Accuracies and Land Reso Graphical Models for Categorical Data Alberto Roverato,2017-08-24 For advanced students of network data science this compact account covers both well established methodology and the theory of models recently introduced in the graphical model literature It focuses on the discrete case where all variables involved are categorical and in this context it achieves a unified presentation of classical and recent results **Human Biology** Raymond Pearl,1929 Includes section Recent literature useful in the study of human biology California.
