

DISCRIMINATIVE STIMULUS

A discriminative stimulus is a specific cue or signal that influences behavior by indicating the availability of a particular consequence or reward.

OVERVIEW

A discriminative stimulus is a stimulus that signals that performing a behavior will now lead to reinforcement or punishment. If the discriminative stimulus is absent, we know that performing the behavior will not lead to any outcome. By focusing on the presence of a discriminative stimuli before performing a task, we can start to know specifically when our behaviors will lead to certain outcomes.

EXAMPLES

Rat and Lever: In an experiment involving a rat and a lever, the light in the cage might turn on to show food is loaded in the lever. This light signals to the rat that pressing the lever now will result in food.

Presence of an Authority: A child about to graffiti on their school desk will look around for a teacher. They know the presence of a teacher will lead to punishment, but without their presence, no punishment will result.

Discriminative Stimulus Properties of Drugs Harbans Lal, 2013-03-13 As one who has gone down the wayward path from pure organic chemistry to biochemistry to pharmacology I was not quite prepared to go all the way into the field of discriminable stimuli The organizer of the symposium on discriminable stimuli induced by drugs Dr Harbans Lal did seduce me into attending Having lost my behavioral virginity I now stare with open eyes at the field One item in particular at this meeting exemplifies to me the power of such techniques Dr Albert Weissman mentioned the problem he tackled with getting rats to discriminate between saline and dilute solutions of aspirin Under ordinary circumstances the animals could not perform this task However if the animals were sensitized by injection of prostaglandin into their foot pads then they were capable of discriminating even very dilute solutions of aspirin In a sense Al had created a model of the human arthritic who can jolly well tell if you have given him an aspirin or a salt tablet The reader of this volume will find it a good introduction to the utilization of discriminable stimuli induced by drugs After a preface by the organizer two experts discuss basic principles in separate chapters One of these chapters places emphasis on the drugs the other places emphasis on the induced cues and states The Behavioral Neuroscience of Drug Discrimination Joseph H. Porter, Adam J. Prus, 2018-08-30 The goal for this volume is to provide an up to date review of the discriminative stimulus properties of major psychoactive drug classes with an emphasis on how this paradigm enhances our understanding of these drugs and how these findings translate from animals to humans The drug discrimination paradigm applies to both drugs of abuse and drugs for treating mental illnesses and research from these studies has provided immense translational value for learning about the mechanisms responsible for drug effects in humans Drug Discrimination Richard A. Glennon, Richard Young, 2011-08-04 Drug discrimination a practical guide to its contributions to the invention of new chemical entities and evaluations of new or known pharmacological agents Drug discrimination can be described as a drug detection procedure that uses a pharmacologically active agent as the subjective stimulus Although the procedure does require some effort to implement it can be an extremely important tool for understanding drug action Whereas medicinal chemists should come to learn the types of information that drug discrimination studies can offer pharmacologists and psychologists might come to realize how medicinal chemists can apply the types of information that the paradigm routinely provides Drug Discrimination Applications to Medicinal Chemistry and Drug Studies provides in depth analyses of the nature and use of drugs as discriminative stimuli and bridges some of the numerous gaps between medicinal chemistry pharmacology and psychology Stressing the practical aspects of drug discrimination including types of procedures study design data and interpretation the book details the advantages and limitations of drug discrimination studies versus other pharmacologic evaluations Practical information from leading researchers in the field addresses specific topics and techniques that are of interest in drug discovery evaluation and development A groundbreaking new guide to the applications of drug discrimination studies for medicinal chemistry and

neuroscience Drug Discrimination is essential for any scientist researcher or student whose interests involve the design development and or action of drugs acting at the level of the central nervous system Transduction Mechanisms of Drug Stimuli Francis C. Colpaert, Robert L. Balster, 2012-12-06 In this book the latest data available on transduction mechanisms of drug stimuli are presented A common theme underlying the chapter in this volume is the recognition that drugs can act as stimuli in much the same manner as external events do Accordingly the papers focus on the mechanisms by which these stimuli are transduced at different levels of analysis such as the behavioral pharmacological and molecular levels Some chapters discuss the mechanisms of transduction of the discriminative effects of several important classes of drugs while others deal with the methods and research strategies by which these mechanisms can be analyzed Collectively the papers in this volume reflect the current status of knowledge in the rapidly expanding field of behavioral pharmacology

Behavioural Models in Psychopharmacology Paul Willner, 1991-02-21 Behavioural models in psychopharmacology are used for different purposes The main concern of industrial psychopharmacologists is specifically to develop new and improved drugs for the treatment of mental disorders while basic scientists use animal models to investigate the underlying nature of such conditions The important distinction between these different perspectives is made explicit for the first time in this book By considering such conditions as anxiety depression mania and schizophrenia feeding disorders dementia and drug dependence this book provides a comprehensive and critical review of the adequacy of the behavioural procedures used by psychopharmacologists to model psychiatric disorders Graduate students and research workers in psychopharmacology from both academic and industrial spheres as well as clinicians will find this book of considerable interest Cocaine, Marijuana, Designer Drugs Kinfe Redda, Charles A.
