Corrosion by Liquid Metals J. E. Draley, 2013-06-29 The Corrosion Resistant Metals Committee and the Nuclear Metallurgy Committee of the Institute of Metals Division of The Metallurgical Society of AIME sponsored a 2 1 2 day symposium on Corrosion by Liquid Metals The symposium was held in Philadelphia October 13 15 1969 during the 1969 Fall Meeting of the Metallurgical Society and the Materials Engineering Congress of the American Society for Metals Cosponsors included the American Society for Metals and the American Nuclear Society The purpose of the symposium was to bring together the several aspects of the subject of corrosion by liquid metals so that perspective could be provided on the entire subject to help individuals dealing with liquid metal corrosion problems acquire a sound basis of understanding and to provide an opportunity for discussion between those doing research in this field An exposition of the subject is timely in view of the increasing development of liquid metal heat and power sources for special purposes including heat pipe systems NASA's SNAP power systems and the AEC's liquid metal fast breeder reactor system This book contains the proceedings of the symposium divided into four separate topics I Corrosion of Steels by Sodium II Alkali Refractory Metal Interactions III Corrosion by Non Alkali Metals and IV Analysis of Solid Liquid Metal Interactions two sessions *Corrosion by Liquid Metals* J. selection and reactor design Discusses liquid metal corrosion mechanisms Includes models to estimate calculate corrosion rates Presents liquid metal corrosion controls and mitigation methods **Proceedings of the NASA-AEC Liquid-Metals Corrosion Meeting, Lewis Research Center Cleveland, Ohio, October 2-3, 1963**, 1964 **Corrosion of Zirconium and Its Alloys in Liquid Metals** R. Corrosion by Liquid Metals Joseph Edward Draley, John R. Weeks, 1970 *Proceedings of the Nasa-aec Liquid-metals Corrosion Meeting, Volume i*, 1964 The fourth in a series of NASA AEC Liquid Metals Corrosion Meeting held October 2 3 1963 was devoted to discussion of the mechanisms of liquid metal corrosion the results of compatibility tests with alkali metals and the problems related to compatibility testing with alkali metals Previous meetings in this series dealt with a broader range of topics that include mercury corrosion liquid metal analytical chemistry and liquid metal properties In the interest of comprehensive coverage this meeting was restricted in scope It was felt that topics not covered could be deferred to meetings under other auspices planned for the near future *Proceedings of the NASA-AEC Liquid-Metals Corrosion Meeting*, 1964 [Nasa-aec Liquid-metals Corrosion Meeting](#), 1965 **Corrosion of Metals and Hydrogen-Related**

Phenomena J. Flis, 2016-01-11 It is estimated that about 40% of the annual production of metals is used to repair or replace materials damaged by corrosion Corrosion causes waste of the natural material and energy resources it creates serious materials problems for many technologies and adversely affects almost every area of engineering The use of metals in various aggressive environments has resulted in an extremely wide diversity of corrosion problems This book presents a collection of concise reviews written by experts in the field on selected topics of metallic corrosion and on some aspects of interaction of hydrogen with metals A comprehensive range of problems is examined including localized corrosion high temperature corrosion in liquid metals and molten salts transport control in corrosion processes entry of hydrogen into metals hydrogen embrittlement and hydrogen reactions with metals The variety of topics covered in the book will provide corrosion scientists engineers university lecturers and students alike with an interdisciplinary approach to solving problems of materials degradation and surface processes in metal corrosion *Corrosion by Liquid Metals*, 1970 **Liquid Metal Systems** H.U. Borgstedt, 2012-12-06 Liquid metal technology has been the subject of an impetuous development in the recent decades mainly due to the application of liquid met als in nuclear techniques The technological development has been supported by studies of the basic physical chemical properties of liquid metals One major concern is the material behaviour in contact with the liquid metals corrosion and the possible deterioration of metallic and ceramic materials which are in use as constructional or functional materials in such systems Since the corrosion is in many cases not only a simple dissolution process the chemical background of such processes had to be studied Such studies included the determination of solubilities of metals and non metals in liquid metals the measurement of thermodynamic data of dissolved materials and of chemical equilibria Several formerly unknown chemical compounds are formed in liquid metal lnd are only stable in this environment

The research and development devoted to the fission reactor techniques were more or less completed in several countries further work is in progress in some countries in which the interest in fast breeder reactors arose recently Even the worldwide program on fusion reactor technology is related to liquid metals and several laboratories are now contributing to this new technology

Material Behavior and Physical Chemistry in Liquid Metal Systems H. U. Borgstedt, 2012-12-06 The international seminar Material Behavior and Physical Chemistry in Liquid Metal Systems was organized by the Institute of Materials and Solid State Research of the Karlsruhe Nuclear Research Center Karlsruhe Federal Republic of Germany The seminar was held at the Nuclear Engineering School of the center on March 24 26 1981 The aim of the seminar was to give metallurgists chemists and physicists working in different areas of the science and technology of liquid metals an opportunity to discuss the basic work and the need for further work in this field Since the seminar was held near one of the laboratories which for the last few years has been engaged in liquid alkali metal studies participants also had an opportunity to observe modern equipment for liquid alkali metal research Interest in the application of liquid metals as working fluids in energy production conversion and storage is increasing The technology has already demonstrated its high standards which make possible the operation of large sodium cooled fast reactors Past conferences have shown however that there is still a lack of basic knowledge and understanding Therefore the aim of the present seminar was to discuss basic work in detail and most of the papers contributed to this objective
