TOMEK. STRZALKOWSKI, 2022 Discourse Analysis Gillian Brown, George Yule, 1983-07-28 Discourse analysis is a term that has come to have different interpretations for scholars working in different disciplines For a sociolinguist it is concerned mainly with the structure of social interaction manifested in conversation for a psycholinguist it is primarily concerned with the nature of comprehension of short written texts for the computational linguist it is concerned with producing operational models of text understanding within highly limited contexts In this textbook first published in 1983 the authors provide an extensive overview of the many and diverse approaches to the study of discourse but base their own approach centrally on the discipline which to varying degrees is common to them all linguistics Using a methodology which has much in common with descriptive linguistics they offer a lucid and wide ranging account of how forms of language are used in communication Their principal concern is to examine how any language produced by man whether spoken or written is used to communicate for a purpose in a context **Encyclopedia of Contemporary Literary Theory** Irene Rima Makaryk, 1993-01-01 The last half of the twentieth century has seen the emergence of literary theory as a new discipline As with any body of scholarship various schools of thought exist and sometimes conflict within it I R Makaryk has compiled a welcome guide to the field Accessible and jargon free the Encyclopedia of Contemporary Literary Theory provides lucid concise explanations of myriad approaches to literature that have arisen over the past forty years Some 170 scholars from around the world have contributed their expertise to this volume Their work is organized into three parts In Part I forty evaluative essays examine the historical and cultural context out of which new schools of and approaches to literature arose The essays also discuss the uses and limitations of the various schools and the key issues they address Part II focuses on individual theorists It provides a more detailed picture of the network of scholars not always easily pigeonholed into the categories of Part I This second section analyses the individual

achievements as well as the influence of specific scholars and places them in a larger critical context Part III deals with the vocabulary of literary theory It identifies significant complex terms places them in context and explains their origins and use Accessibility is a key feature of the work By avoiding jargon providing mini bibliographies and cross referencing throughout Makaryk has provided an indispensable tool for literary theorists and historians and for all scholars and students of contemporary criticism and culture

Automating Linguistics Jacqueline Léon, 2021-04-26 Automating Linguistics offers an in depth study of the history of the mathematisation and automation of the sciences of language In the wake of the first mathematisation of the 1930s two waves

followed machine translation in the 1950s and the development of computational linguistics and natural language processing in the 1960s. These waves were pivotal given the work of large computerised corpora in the 1990s and the unprecedented technological development of computers and software. Early machine translation was devised as a war technology originating in the sciences of war amidst the amalgamate of mathematics, physics, logics, neurosciences, acoustics and emerging sciences such as cybernetics and information theory. Machine translation was intended to provide mass translations for strategic purposes during the Cold War. Linguistics in turn did not belong to the sciences of war and played a minor role in the pioneering projects of machine translation. Comparing the two trends, the present book reveals how the sciences of language gradually integrated the technologies of computing and software, resulting in the second wave of mathematisation of the study of language, which may be called mathematisation automation. The integration took on various shapes contingent upon cultural and linguistic traditions: USA ex USSR, Great Britain and France. By contrast, working with large corpora in the 1990s, though enabled by unprecedented development of computing and software, was primarily a continuation of traditional approaches in the sciences of language, such as the study of spoken and written texts, lexicography and statistical studies of vocabulary.

William O. Hendricks, 2019-01-29. No detailed description available for *Essays on Semiolinguistics and Verbal Art* Text and Interpretation
Hartin, Petzer, 2019-07-01. *Text and Interpretation* gives an insight into the many different approaches that more recent South African scholarship has adopted in the interpretation of the New Testament. While the number of approaches in New Testament interpretation has proliferated over the past few years, all the proposals still fall under one of the three traditional poles: sender, author, text, receptor, reader. Classified according to this division, each chapter has a twofold aim. Firstly, the perspective is situated within a wider framework of interpretation to illustrate the context out of which this approach emerges. Secondly, each article has selected a particular New Testament text to demonstrate this approach in practice. The authors of these chapters, the majority of which are South African scholars, were chosen because of their expertise in their specific fields. By presenting these studies together in one collection, the scholarship in these different areas will become more readily accessible to a wider group of scholars.
