**Current state and prospects of the socio-cognitive approach to discourse**

David A. van Dijk

Frederic F. van Leeuwen, Amsterdam

Version 3.0, March 2012

### **Introduction**

The current study of discourse should be based on a multidisciplinary theory explicitly relating discourse structures with societal structures and then describe and explain how structures of power and power abuse are discursively created and reproduced. The main theme of a socio-cognitive contribution to this theory is that these relations between discourse and society are cognitively mediated. In this chapter we sketch the current state of this socio-cognitive approach as well as its future prospects, based on our research of the past 50 years (see also *Van Dijk, 2009*).

Most earlier and contemporary theories in Critical Discourse Studies of CDA, as well as its neighbouring disciplines, such as sociolinguistics and linguistic anthropology, assumed a direct link between discourse and society (or culture). It is generally assumed in these disciplines that social variables such as those of social class, gender, ideology or age directly cause or control language variation and structures of text and talk. The problem is that the nature of these causal or control relationships is not made explicit but taken for granted or reduced to unexplained correlations.

Another fundamental problem is that societal structures and discourse structures are of a very different kind and hence cannot come in a causal relationship in the first place. A socio-cognitive theory assumes that social structures exist in the conceptual and reproduced

integrative perspective starting from the assumption that genres are cognitive constructs recognized maintained and employed by members of a given discourse community Its central questions are What does genre knowledge consist of How is it organized in cognition How is it applied in discourse production and interpretation How is it reflected in language use

*Causal Categories in Discourse and Cognition* Ted Sanders,Eve Sweetser,2009-12-22 All languages of the world provide their speakers with linguistic means to express causal relations in discourse Causal connectives and causative auxiliaries are among the salient markers of causal construals Cognitive scientists and linguists are interested in how much of this causal modeling is specific to a given culture and language and how much is characteristic of general human cognition Speakers of English for example can choose between because and since or between therefore and so How different are these from the choices made by Dutch speakers who speak a closely related language but unlike English speakers have a dedicated marker for non volitional causality daardoor The central question in this volume is What parameters of categorization shape the use

of causal connectives and auxiliary verbs across languages The book discusses how differences between even quite closely related languages English Dutch Polish can help us to elaborate the typology of levels and categories of causation represented in language In addition the volume demonstrates convergence of linguistic corpus linguistic and psycholinguistic methodologies in determining cognitive categories of causality The basic notion of causality appears to be an ideal linguistic phenomenon to provide an overview of methods and perhaps more importantly invoke a discussion on the most adequate methodological approaches to study fundamental issues in language and cognition Discourse, Vision, and Cognition Jana Holánova, 2008-03-20 While there is a growing body of psycholinguistic experimental research on mappings between language and vision on a word and sentence level there are almost no studies on how speakers perceive conceptualise and spontaneously describe a complex visual scene on higher levels of discourse This book explores the relationship between language eye movements and cognition and brings together discourse analysis with cognitively oriented behavioral research Based on the analysis of data drawn from spoken descriptive discourse spontaneous conversation and experimental investigations this work offers a comprehensive picture of the dynamic natures of language vision and mental imagery Verbal and visual data synchronised and correlated by means of a multimodal scoring method are used as two windows to the mind to show how language and vision in concert can elucidate covert mental processes **Language Learning, Discourse and Cognition** Lucy Pickering, Vyvyan Evans, 2018-12-15 Language Learning Discourse and Cognition Studies in the tradition of Andrea Tyler comprises a collection of original empirically and theoretically motivated studies at the nexus of discourse analysis cognitive linguistics and second language learning The thematic relationships between these subfields and links between the studies are laid out in introductory and concluding chapters This edited volume is intended for both researchers and graduate students in linguistics and second language learning and teaching *Genre in Language, Discourse and Cognition*, 2016 The study of genre is scattered across research disciplines This volume offers an integrative perspective starting from the assumption that genres are cognitive constructs recognized maintained and employed by members of a given discourse community Its central questions are What does genre knowledge consist of How is it organized in cognition How is it applied in discourse production and interpretation How is it reflected in language use *Cognitive Discourse Analysis* Thora Tenbrink, 2020-02-13 Analysing language data systematically and looking closely at how people formulate their thoughts can reveal astonishing insights about the human mind Without presupposing specific subject knowledge this book gently introduces its readers to theoretical insights as well as practical principles for systematic linguistic analysis from a cognitive perspective Drawing on Thora Tenbrink's twenty years experience in both linguistics and cognitive science this book offers theoretical guidance and practical advice for doing cognitive discourse analysis It covers areas of analysis as diverse as attention perspective granularity certainty inference transformation communication and cognitive strategies using inspiring examples from many different projects Simple techniques and tools are used to allow readers new to the subject

easy ways to apply the methods without the need for complex technologies whilst the cross disciplinary approach can be applied to a diverse range of research purposes and contexts in which language and thought play a role

Critical Discourse Studies in Context and Cognition Christopher Hart,2011-08-17 Critical Discourse Studies CDS is an exciting research enterprise in which scholars are concerned with the discursive reproduction of power and inequality However researchers in CDS are increasingly recognising the need to investigate the cognitive dimensions of discourse and context if they want to fully account for any connection between language legitimisation and social action This book presents a collection of papers in CDS concerned with various ideological discourses Analyses are firmly rooted in linguistics and cognition constitutes a major focus of attention The chapters which are written by prominent researchers in CDS come from a broad range of theoretical perspectives spanning pragmatics cognitive psychology and cognitive linguistics The book is essential reading for anyone working at the cutting edge of CDS and especially for those wishing to explore the central place that cognition must surely hold in the relationship between discourse and society

**Exploring Discourse Strategies in Social and Cognitive Interaction** Manuela Romano, Maria Dolores Porto,2016-03-31 This volume offers readers interested in Discourse Analysis and or Socio Cognitive models of language a closer view of the relationship between discourse cognition and society by disclosing how the cognitive mechanisms of discourse processing depend on shared knowledge and situated cognition An inter and multidisciplinary approach is proposed that combines theories and methodologies coming from Conceptual Metaphor Theory Multimodal Metaphor Theory Critical Discourse Analysis Narratology Systemic Functional Linguistics Appraisal Theory together with the most recent developments of Socio Cognitive Linguistics for the analysis of real communicative events which range from TV reality shows commercials digital stories or political debates to technical texts architectural memorials newspapers and autobiographical narratives Still several key notions are recurrent in all contributions embodiment multimodality conceptual integration metaphor and creativity as the fundamental constituents of discourse processing It is only through this wide ranging epistemological and empirical approach that the complexity of discourse strategies in real contexts i e human communication can be fully comprehended and that discourse analysis and cognitive linguistics can be brought closer together

Language in Use Andrea Tyler,2005 This book explores how language is shaped by the nature of human cognition and social cultural activity by studying how language is used in context in interactions between at least two people in order to achieve some purpose It brings together perspectives from cognitive linguistics discourse analysis and first and second language acquisition research Provided by the publisher

**Discourse and Knowledge** Teun A. van Dijk,2014-07-17 Most of our knowledge is acquired by discourse and our ability to produce and understand discourse is impossible without the activation of massive amounts of knowledge of the world Both discourse and knowledge are fundamental concepts of the humanities and social sciences but they are often treated separately Based on a theory of natural knowledge the book deals with the cognitive processes social distribution cultural differences and the

linguistic and discursive management of knowledge in interaction and communication in epistemic communities The first book to adopt a multidisciplinary approach to studying the relationship between the two concepts Discourse and Knowledge introduces the new field of epistemic discourse analysis Using a wide range of examples to illustrate the theory it is essential reading for both students and academics interested in epistemology linguistics discourse analysis cognitive and social psychology and the social sciences *Conversation and Cognition* Hedwig Te Molder,2005 Written by leading figures in the fields of conversation analysis discursive psychology and ethnomethodology this comprehensive and accessible book looks at the challenging implications of new discourse approaches to the topic of cognition It opens up important new ways of understanding the relation between language and cognition Interlingual and Intercultural Communication Juliane House,Shoshana Blum-Kulka,1986 **Approaches to Cognition through Text and Discourse** Tuija Virtanen,2011-05-03 The purpose of this book is to explore the overlapping area of study that discourse linguists and cognitive linguists are interested in In doing so the volume contributes to bridging the gap between these two large groups of linguists who share an interest in discourse processing but approach the area from very different perspectives and frames of reference The starting point of this volume is text and discourse The book includes an overview section and a number of carefully selected contributions which highlight central issues in the study of text and discourse attempting to give them cognitive explanations In responding to the current interest in the area of discourse and cognition the volume has adopted a wide scope which allows its individual chapters to focus on textual and situational contexts as well as the context of culture and society at large The volume also provides its readership with a useful selection of methods used in the studies which form the basis of its chapters The contributions all by established linguists with highest qualifications present new findings which have important theoretical implications They offer unique and fresh analyses of central discourse phenomena in cognitive light and revealing discussions of the avenues opened to us at this stage of the development of the study of discourse and cognition This accessible research volume will be essential reading for scholars and advanced students of linguistics and languages

Critical Discourse Analysis and Language Cognition Kieran O'Halloran,2019-08-06 An interdisciplinary study of issues of language manipulation this book explores the interpretation stage of critical discourse analysis CDA for students in areas such as English language media studies and applied linguistics as well as practitioners in the field It also offers a new way forward for highlighting manipulative language accomplishing this through the innovation of a model of reading for gist The model is an original synthesis of elements from four contemporary cognitive frameworks connectionism cognitive linguistics psycholinguistic evidence on inference generation and relevance theory Significantly Kieran O Halloran also shows how each of these frameworks challenges current notions of cognition in CDA and he carefully works through the implications of this for how CDA highlights manipulative language Features Shows clearly how more systematic and reliable prediction can be made as to whether a news text is likely to manipulate someone reading for gist Provides accessible outlines of

connectionism cognitive linguistics psycholinguistic research on inference generation relevance theory which assume no previous knowledge Brings together contemporary linguistic and cognitive approaches which usually do not communicate Provides a useful overview of how language cognition is understood in CDA revealing tensions in this understanding In offering novel criticism of some key aspects of CDA and in suggesting ways in which critical analyses of news texts can be improved this book is likely to be both topical and controversial

**Discourse, Interaction and Cognition** Charles Antaki, 2006 *The Reasons We Speak* Miguel Mantero, 2002-10-30 The role of cognition in a literature based foreign language classroom is investigated and explained here By implementing a sociocultural approach cognition is understood as the basic building block for all human learning and language development This study incorporates various understandings and views from reader response theory literary theory and discourse analysis in order to support the conclusions reached through authentic classroom discourse analysis Along with clarifying current trends in second language acquisition theory this text also offers the classroom teacher practical suggestions on how to approach and evaluate classroom talk that is based on literature or authentic readings The book also contains new approaches and views on the roles of reader response theory in the language classroom that are also reflected in a contemporary literary theory that has been developed especially with second language readers and learners in mind The author challenges the current view of scaffolding as demonstrated in the data analysis and offers a more realistic interpretation of what may actually be taking place in the language classrooms under the guise of scaffolding The role of opportunities to enter into discourse becomes central to the main argument and is exemplified through actual classroom transcripts

*Discourse, Tools and Reasoning* Lauren B. Resnick, Roger Säljö, Clotilde Pontecorvo, Barbara Burge, 2013-06-29 Not long ago projections of how office technologies would revolutionize the production of documents in a high tech future carried many promises The paperless office and the seamless and problem free sharing of texts and other work materials among coworkers were just around the corner we were told To anyone who has been involved in putting together a volume of the present kind such forecasts will be met with considerable skepticism if not outright distrust The diskette the email the fax the net and all the other forms of communication that are now around are powerful assets but they do not in any way reduce the flow of paper or the complexity of coordinating activities involved in producing an artifact such as a book Instead the reverse seems to be true Obviously the use of such tools requires considerable skill at the center of coordination to borrow an expression from a chapter in this volume As editors we have been fortunate to have Ms Lotta Strand Linköping University at the center of the distributed activity that producing this volume has required over the last few years With her considerable skill and patience Ms Strand and her work provide a powerful illustration of the main thrust of most of the chapters in this volume Practice is a coordination of thinking and action and many things had to be kept in mind during the production of this volume
