System Identification and Robust Control Steen Toffner-Clausen, 2012-12-06 The series Advances in Industrial Control aims to report and encourage technology transfer in control engineering The rapid development of control technology impacts all areas of the control discipline New theory new controllers actuators sensors new industrial processes computer methods new applications new philosophies new challenges Much of this development work resides in industrial reports feasibility study papers and the reports of advanced collaborative projects The series offers an opportunity for

researchers to present an extended exposition of such new work in all aspects of industrial control for wider and rapid dissemination The present text Steen Toffner Clausen deals with both system identification and robust control It provides a very comprehensive tutorial introduction to some of the most difficult topics in robust control theory before considering applications problems Traditional H_∞ robust control design concepts for multivariable systems are first considered and the problems of robust stability and performance are discussed The following chapter introduces the idea of the structured singular value and applies this to both analysis and synthesis problems The author manages to provide a very straightforward introduction to this subject and also introduces some new ideas

Engineering Applications of Neural Networks Lazaros S. Iliadis, Harris Papadopoulos, Chrisina Jayne, 2013-09-25 The two volumes set CCIS 383 and 384 constitutes the refereed proceedings of the 14th International Conference on Engineering Applications of Neural Networks EANN 2013 held on Halkidiki Greece in September 2013 The 91 revised full papers presented were carefully reviewed and selected from numerous submissions The papers describe the applications of artificial neural networks and other soft computing approaches to various fields such as pattern recognition predictors soft computing applications medical applications of AI fuzzy inference evolutionary algorithms classification learning and data mining control techniques aspects of AI evolution image and video analysis classification pattern recognition social media and community based governance medical applications of AI bioinformatics and learning

Kheir, 2014-05-23 This volume is the published proceedings of selected papers from the IFAC Symposium Boston Massachusetts 24-25 June 1991 where a forum was provided for the discussion of the latest advances and techniques in the education of control and systems engineers Emerging technologies in this field neural networks fuzzy logic and symbolic computation are incorporated in the papers Containing 35 papers these proceedings provide a valuable reference source for anyone lecturing in this area with many practical applications included

Discrete-time Control Systems Katsuhiko Ogata, 1995 In depth discussions of selected topics such as Z transform and pole placement when the control signal was a vector quantity have been moved to optional Appendices discusses in detail the theoretical background for designing control systems offers a greatly expanded treatment of the pole placement design with minimum order observer by means of state space approach Ch 6 and polynomial equations approach Ch 7 features a new chapter on the polynomial equations approach to the control systems design as an alternative to the design of control systems via pole placement with minimum order observers Includes the design of model matching control systems emphasizes the usefulness of MATLAB for studying discrete time control systems showing how to use MATLAB optimally to obtain numerical solutions that involve various types of vector matrix operations plotting response curves and system design based on quadratic optimal control presents many instructive examples and worked out problems throughout the entire book

Communications and Information Processing Maotai Zhao, Junping Sha, 2012-06-28 The two volume set CCIS 288 and 289 constitutes the thoroughly refereed post conference

proceedings of the First International Conference on Communications and Information Processing ICCIP 2012 held in Aveiro Portugal in March 2012 The 168 revised full papers of both volumes were carefully reviewed and selected from numerous submissions The papers present the state of the art in communications and information processing and feature current research on the theory analysis design test and deployment related to communications and information processing systems

Automation 2018 Roman Szewczyk, Cezary Zieliński, Małgorzata Kaliczyńska, 2018-03-07 This book consists of papers presented at Automation 2018 an international conference held in Warsaw from March 21 to 23 2018 It discusses the radical technological changes occurring due to the INDUSTRY 4.0 with a focus on offering a better understanding of the Fourth Industrial Revolution Each chapter presents a detailed analysis of interdisciplinary knowledge numerical modeling and simulation as well as the application of cyber physical systems where information technology and physical devices create synergic systems leading to unprecedented efficiency The theoretical results practical solutions and guidelines presented are valuable for both researchers working in the area of engineering sciences and practitioners looking for solutions to industrial problems

Process Modelling, Identification, and Control Ján Mikleš, Miroslav Fikar, 2007-06-30 Control and automation in its broadest sense plays a fundamental role in process industries Control assures stability of technologies disturbance attenuation safety of equipment and environment as well as optimal process operation from economic point of view This book intends to present modern automatic control methods and their applications in process control in process industries The processes studied mainly involve mass and heat transfer processes and chemical reactors It is assumed that the reader has already a basic knowledge about controlled processes and about differential and integral calculus as well as about matrix algebra Automatic control problems involve mathematics more than it is usual in other engineering disciplines The book treats problems in a similar way as it is in mathematics The problem is formulated at first then the theorem is stated Only necessary conditions are usually proved and sufficiency is left aside as it follows from the physical nature of the problem solved This helps to follow the engineering character of problems The intended audience of this book includes graduate students but can also be of interest to practising engineers or applied scientists
