**Disease Mapping with WinBUGS and MLwiN** Andrew B. Lawson, William J. Browne, Carmen L. Vidal Rodeiro, 2003-09-12 Disease mapping involves the analysis of geo referenced disease incidence data and has many applications for example within resource allocation cluster alarm analysis and ecological studies There is a real need amongst public health workers for simpler and more efficient tools for the analysis of geo referenced disease incidence data Bayesian and multilevel methods provide the required efficiency and with the emergence of software packages such as WinBUGS and MLwiN are now easy to implement in practice Provides an introduction to Bayesian and multilevel modelling in disease mapping Adopts a practical approach with many detailed worked examples Includes introductory material on WinBUGS and MLwiN Discusses three applications in detail relative risk estimation focused clustering and ecological analysis Suitable for public health workers and epidemiologists with a sound statistical knowledge Supported by a Website featuring data sets and WinBUGS and MLwiN programs Disease Mapping with WinBUGS and MLwiN provides a practical introduction to the use of software for disease mapping for researchers practitioners and graduate students from statistics public health and epidemiology who analyse disease incidence data

**Social Environment and Cancer in Europe** Guy Launoy, Vesna Zadnik, Michel P. Coleman, 2021-05-31 This contributed volume addresses the link between the social environment and cancer in Europe The authors document the wide range and diverse trends in cancer incidence and patient survival in Europe and they identify the main mechanisms and key influences that underlie these inequalities They suggest a series of actions and programmes to tackle these inequalities in Europe within the conceptual framework of intervention research The influence of the social environment on the risk of suffering and dying from cancer is obviously a global phenomenon as evidenced by a growing number of studies and books In part the underlying mechanisms are universal Given the availability of a new standardised measure for social deprivation in Europe the European Deprivation Index the networking of population based cancer registries across Europe as efficient surveillance tools the increasing comparability of the organisation of care in European countries and the recent launch of Europe's Beating Cancer Plan this extensive review of social inequalities in cancer on a European scale is both relevant and timely The book consists of 21 chapters organised in four sections Part I General Considerations and Methodologic Aspects Part II Social Disparities in Cancer Incidence and Survival Reports Part III Social Disparities in Cancer Incidence and Survival Mechanisms Part IV Towards an Evidence Based Policy for Tackling Social Inequalities in Cancer Social Environment and Cancer in Europe Towards an Evidence Based Public Health Policy is a unique resource that presents up to date methods for analysing quantitative data It focusses on inequalities in cancer incidence and survival within the wider framework of inequalities in health This book will be an essential reference for policy makers researchers public health professionals social scientists and oncologists

**Statistical Methods in Spatial Epidemiology** Andrew B. Lawson, 2013-07-08 Spatial epidemiology is the description and analysis of

the geographical distribution of disease It is more important now than ever with modern threats such as bio terrorism making such analysis even more complex This second edition of Statistical Methods in Spatial Epidemiology is updated and expanded to offer a complete coverage of the analysis and application of spatial statistical methods The book is divided into two main sections Part 1 introduces basic definitions and terminology along with map construction and some basic models This is expanded upon in Part II by applying this knowledge to the fundamental problems within spatial epidemiology such as disease mapping ecological analysis disease clustering bio terrorism space time analysis surveillance and infectious disease modelling Provides a comprehensive overview of the main statistical methods used in spatial epidemiology Updated to include a new emphasis on bio terrorism and disease surveillance Emphasizes the importance of space time modelling and outlines the practical application of the method Discusses the wide range of software available for analyzing spatial data including WinBUGS SaTScan and R and features an accompanying website hosting related software Contains numerous data sets each representing a different approach to the analysis and provides an insight into various modelling techniques This text is primarily aimed at medical statisticians researchers and practitioners from public health and epidemiology It is also suitable for postgraduate students of statistics and epidemiology as well professionals working in government agencies

Applied Spatial Data Analysis with R Roger S. Bivand, Edzer Pebesma, Virgilio Gómez-Rubio, 2013-06-21 Applied Spatial Data Analysis with R second edition is divided into two basic parts the first presenting R packages functions classes and methods for handling spatial data This part is of interest to users who need to access and visualise spatial data Data import and export for many file formats for spatial data are covered in detail as is the interface between R and the open source GRASS GIS and the handling of spatio temporal data The second part showcases more specialised kinds of spatial data analysis including spatial point pattern analysis interpolation and geostatistics areal data analysis and disease mapping The coverage of methods of spatial data analysis ranges from standard techniques to new developments and the examples used are largely taken from the spatial statistics literature All the examples can be run using R contributed packages available from the CRAN website with code and additional data sets from the book s own website Compared to the first edition the second edition covers the more systematic approach towards handling spatial data in R as well as a number of important and widely used CRAN packages that have appeared since the first edition This book will be of interest to researchers who intend to use R to handle visualise and analyse spatial data It will also be of interest to spatial data analysts who do not use R but who are interested in practical aspects of implementing software for spatial data analysis It is a suitable companion book for introductory spatial statistics courses and for applied methods courses in a wide range of subjects using spatial data including human and physical geography geographical information science and geoinformatics the environmental sciences ecology public health and disease control economics public administration and political science The book has a website where complete code examples data sets and other support material may be found <http://www.asdar-book.org> The authors

**Selection Bias and Covariate Imbalances in Randomized Clinical Trials** Vance Berger,2005-05-27 Baseline data in clinical trials consists of information regarding patients that is measured at the outset prior to randomization or treatment with study medications In studies where important baseline factors appear well balanced it can be reasonably concluded that any differences in outcome between the intervention and control groups are a real effect of treatment The common assumption that any baseline differences in a randomized study are necessarily random is however misplaced Selection bias can and does occur even in randomized clinical trials Steps need to be taken in order to ensure that this does not compromise the integrity of clinical trials hence *Selection Bias and Covariate Imbalances in Randomized Clinical Trials* offers the first comprehensive treatment of the subject and the methodology involved Provides an overview of the hierarchy of study designs and justifies the position of randomized trials at the top of this hierarchy Discusses the strengths and defects of randomization and provides real evidence to justify concern regarding its defects Outlays the damaging consequences that selection bias causes when it does occur Considers courses of action that can be taken to manage contain the problem Presents methods that can be used to detect selection bias in randomized trials and methods to correct for selection bias Concludes by providing a comprehensive plan for managing baseline imbalances and selection bias in randomized trials and proposing open problems for future research *Selection Bias and Covariate Imbalances in Randomized Clinical Trials* provides an in depth overview of a key aspect in the design and analysis of clinical trials featuring modern and novel approaches to the methodology described Illustrated with case studies this book introduces groundbreaking ideas and research that will be invaluable to researchers and practitioners who design and analyse clinical trials It will also be of interest to graduate students within the field of biostatistics
