Drug Discovery For Nervous System Diseases:

Drug Discovery for Nervous System Diseases Franz Hefti, 2005 The neurosciences have been an especially difficult field for drug discovery Because of the huge complexity of the nervous system and poor understanding of most psychiatric and neurological diseases most drugs currently available are the result of chance observations rather than a truly comprehensive approach However this situation has begun to change Enormous progress in molecular biology has yielded breakthrough discoveries of the causes of nervous system diseases opening the door for better targeted and entirely novel therapies Reflecting these recent advances Drug Discovery for Nervous System Diseases presents the latest techniques and approaches for drug discovery organizing them according to diseases rather than classes of drugs or drug targets as past books have done Written with optimistic anticipation of great progress still to come this text provides both a guide to present realities and a look to future possibilities in this burgeoning field Coverage in Drug Discovery for Nervous System Diseases includes Fundamentals of drug discovery receptors target selection and drug development Schizophrenia Depression Anxiety disorders Alzheimer s disease Parkinson s disease Ischemic stroke brain and spinal cord injury Other neurodegenerative diseases Sleep disorders Epilepsy Pain This practical handbook features a uniform presentation for each chapter with a brief description of existing drugs leading to recent molecular biological and genetic findings translational research and the interface to clinical trials and finally an outlook on future drug targets Rich illustrations schematic diagrams and tables provide a dynamic visual experience throughout the text A unique and up to date guide to a field currently undergoing a major growth spurt Drug Discovery for Nervous System Diseases offers both practitioners and advanced students an unparalleled resource

Improving and Accelerating Therapeutic Development for Nervous System Disorders Institute of Medicine, Board on Health Sciences Policy, Forum on Neuroscience and Nervous System Disorders, 2014-02-06 *Improving and Accelerating Therapeutic Development for Nervous System Disorders* is the summary of a workshop convened by the IOM Forum on Neuroscience and Nervous System Disorders to examine opportunities to accelerate early phases of drug development for nervous system drug discovery Workshop participants discussed challenges in neuroscience research for enabling faster entry of potential treatments into first in human trials explored how new and emerging tools and technologies may improve the efficiency of research and considered mechanisms to facilitate a more effective and efficient development pipeline There are several challenges to the current drug development pipeline for nervous system disorders The fundamental etiology and pathophysiology of many nervous system disorders are unknown and the brain is inaccessible to study making it difficult to develop accurate models Patient heterogeneity is high disease pathology can occur years to decades before becoming clinically apparent and diagnostic and treatment biomarkers are lacking In addition the lack of validated targets limitations related to the predictive validity of animal models the extent to which the model predicts clinical efficacy and regulatory barriers can also impede translation and drug development for nervous system disorders *Improving*

and Accelerating Therapeutic Development for Nervous System Disorders identifies avenues for moving directly from cellular models to human trials minimizing the need for animal models to test efficacy and discusses the potential benefits and risks of such an approach This report is a timely discussion of opportunities to improve early drug development with a focus toward preclinical trials

specific recombinases Examples of the use of mouse models in the study of neurological illness Therapeutic Development in the Absence of Predictive Animal Models of Nervous System Disorders National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, Forum on Neuroscience and Nervous System Disorders, 2017-05-24 Compared with other disease areas central nervous system CNS disorders have had the highest failure rate for new compounds in advanced clinical trials Most CNS drugs fail because of efficacy and the core issue underlying these problems is a poor understanding of disease biology Concern about the poor productivity in neuroscience drug development has gained intensity over the past decade amplified by a retraction in investment from the pharmaceutical industry This retreat by industry has been fueled by the high failure rate of compounds in advanced clinical trials for nervous system disorders In response to the de emphasis of CNS disorders in therapeutic development relative to other disease areas such as cancer metabolism and autoimmunity the National Academies of Sciences Engineering and Medicine initiated a series of workshops in 2012 to address the challenges that have slowed drug development for nervous system disorders Motivated by the notion that advances in genetics and other new technologies are beginning to bring forth new molecular targets and identify new biomarkers the Academies hosted the third workshop in this series in September 2016 Participants discussed opportunities to accelerate early stages of drug development for nervous system disorders in the absence of animal models that reflect disease and predict efficacy This publication summarizes the presentations and discussions from the workshop Biochemicals, Reagents & Kits for Life Science Research Sigma Chemical Company, 2006 Modern Drug Discovery and Development for the Treatment of Neurological Disorders Emmett Bentley, 2023-09-19 Neurological disorders refer to the disorders that affect the nervous system which includes spinal cord brain peripheral nerves cranial nerves autonomic nervous system nerve roots and neuromuscular junction Alzheimer s disease Parkinson s disease epilepsy depression dementia multiple sclerosis and brain tumors are some of the neurological disorders These disorders occur due to electrical structural and biochemical abnormalities occurring in the brain and spinal cord along with other nerves which can result in a range of symptoms The high biological and symptomatic heterogeneity of significant neurological disorders makes it a challenging task to develop efficient treatments that can manage all the symptoms Majority of the drugs available currently are focused on reducing the symptoms in place of amelioration of the cause that leads to the symptom Thus directing the focus on one major symptom that is well understood might result in a viable approach for the development and discovery of drugs for neurological disorders This book contains some path breaking studies in the discovery and development of drugs for treating neurological disorders It will provide comprehensive knowledge to the readers

Improving the Utility and Translation of Animal Models for Nervous System Disorders Forum on Neuroscience and Nervous System Disorders, Board on Health Sciences Policy, Institute of Medicine, 2013-04-08 Nervous system diseases and disorders are highly prevalent and substantially contribute to the overall disease burden Despite significant information

provided by the use of animal models in the understanding of the biology of nervous system disorders and the development of therapeutics limitations have also been identified Treatment options that are high in efficacy and low in side effects are still lacking for many diseases and in some cases are nonexistent A particular problem in drug development is the high rate of attrition in Phase II and III clinical trials Why do many therapeutics show promise in preclinical animal models but then fail to elicit predicted effects when tested in humans On March 28 and 29 2012 the Institute of Medicine Forum on Neuroscience and Nervous System Disorders convened the workshop Improving Translation of Animal Models for Nervous System Disorders to discuss potential opportunities for maximizing the translation of new therapies from animal models to clinical practice The primary focus of the workshop was to examine mechanisms for increasing the efficiency of translational neuroscience research through discussions about how and when to use animal models most effectively and then best approaches for the interpretation of the data collected Specifically the workshop objectives were to discuss key issues that contribute to poor translation of animal models in nervous system disorders examine case studies that highlight successes and failures in the development and application of animal models consider strategies to increase the scientific rigor of preclinical efficacy testing explore the benefits and challenges to developing standardized animal and behavioral models Improving the Utility and Translation of Animal Models for Nervous System Disorders Workshop Summary also identifies methods to facilitate development of corresponding animal and clinical endpoints identifies methods that would maximize bidirectional translation between basic and clinical research and determines the next steps that will be critical for improvement of the development and testing of animal models of disorders of the nervous system **Drug Repositioning**

Joel Dudley, Laura Berliocchi, 2017-07-14 Nervous system diseases represent a major health concern worldwide Although important financial and professional investment their etiology and pathophysiology still remain mostly elusive Moreover the clinical need of disease modifying therapies is still unmet In the last decades traditional R D has failed in identifying new effective therapies in many medical areas and drug repositioning has recently emerged as a promising alternative strategy to de novo drug discovery to improve and accelerate therapeutic development For the first time Drug Repositioning Approaches and Applications for Neurotherapeutics reviews history and advances in drug repositioning with a special focus on therapeutics for nervous system diseases International experts from Academia Industry and Non profit organisations will provide different views on drug repositioning advantages challenges and specific applications which will be covered for nervous system diseases including Alzheimer s Parkinson s Huntington s diseases Amyotrophic Lateral Sclerosis Spinal Muscular Atrophy ischemic stroke and psychiatric disorders This book provides a balanced overview and synthesis of drug repositioning concept methods and applications for neurotherapeutics It represents a valuable resource for students scientists and clinicians working in academic settings industry and government agencies within the fields of neuroscience pharmacology neurology pharmaceutical sciences drug discovery and development Medicinal & Aromatic Plants
