Dual Purpose Space Technologies:

Dual-purpose Space Technologies George Washington University. Space Policy Institute,2001 **The transfer of dual-use outer space technologies: confrontation or co-operation?** , The right of any State to develop outer space technologies is in principle unquestionable In practice problems arise when technology development approaches the very fine line between civil and military application largely because most the technologies can be used for dual military and civil purposes This dichotomy has raised a series of political military and other concerns which affect the transfer of outer space technologies and particularly between established and emerging space competent States Accordingly several States have sought means to curb the transfer of specific dual use outer space technologies particularly launcher technology while allowing some transfer of these technologies for civil use This document argues that the interests of both suppliers and recipients States can best be served not through selective control regimes but through joint co operative measures because it is the most efficient way to control civil use of outer space technologies while at the same time ensuring their transfers

The transfer of dual-use outer space technologies Péricles Gasparini Alves,2000 The right of any State to develop outer space technologies is in principle unquestionable In practice problems arise when technology development approaches the very fine line between civil and military application largely because most the technologies can be used for dual military and civil purposes This dichotomy has raised a series of political military and other concerns which affect the transfer of outer space technologies and particularly between established and emerging space competent States Accordingly several States have sought means to curb the transfer of specific dual use outer space technologies particularly launcher technology while allowing some transfer of these technologies for civil use This document argues that the interests of both suppliers and recipients States can best be served not through selective control regimes but through joint co operative measures because it is the most efficient way to control civil use of outer space technologies while at the same time ensuring their transfers

Dual-Use Space Technology Transfer Conference and Exhibition ,1994 **Space Technology Export Controls and International Cooperation in Outer Space** Michael Mineiro,2011-11-08 Export controls definitively impact international cooperation in outer space Civil and commercial space actors that engage in international endeavors must comply with space technology export controls In the general discourse members of the civil and commercial space community have an understanding of their domestic export control regime However a careful reading of the literature on space technology export controls reveals that certain questions relevant to international engagements have not been identified or answered What is the legal political origin of space technology export controls How do they relate to the current international legal structure What steps can be taken to evolve our current unilateral paradigm of space technology within the context of peaceful exploration and use of outer space In this book these and other relevant questions on space technology export controls are identified and assessed through an insightful case study of the U S commercial

communication export control regime The findings of this case study are used in an international legal political analysis of international space law public international law and international cooperation Breaking new ground in international legal theory a self justified security dilemma that is manifest in international law is identified and explained as the origin for the current paradigm of space technology export controls

Understanding Threats to Space Systems and Space Assets Jakub Pražák, 2025-09-09 This book explores the current space threat profile in an increasingly contested congested and competitive space environment This work looks at the conflictual nature of space relations and highlights various issues resulting from great power competition in the space domain This book recognizes non state entities increased engagement in this domain including their different roles and consequently incorporates commercial actors into space strategic thinking It also discusses the perils of the space environment political conflicts space weapons malicious space operations and the risks stemming from potentially hazardous dual se technology Finally this book outlines the means to improve the protection of space systems with an emphasis on the inclusion of a broad spectrum of stakeholders and offers arguments for the establishment of new norms to strengthen the responsible use of outer space This book will be of much interest to students of space power security studies and international relations

Introduction to Space Law Tanja Masson-Zwaan, Mahulena Hofmann, 2024-12-16 Introduction to Space Law is a completely revised edition since the previous version of 2008 providing a concise and structured analysis of legal aspects of both traditional and more recent space activities The relevance and substance of space law as a branch of public international law continues to expand The fourth edition of this long time classic in the field of space law has been substantially rewritten to reflect new developments in space law and technology of the past ten years but the main structure of the original book has been preserved This updated text includes new or expanded material on the proliferation of non state and commercial entities as space actors the appearance of innovations in space technology the evolving international law of satellite telecommunications in a networked world and the adoption of national laws and international soft law mechanisms that complement the international treaty regime

Space as a Strategic Asset Joan Johnson-Freese, 2007 Joan Johnson Freese argues that the race for space weapons and the U S quest for exclusive or at least dominant ownership of strategic space assets have alienated the very allies that the United States needs in order to maintain its leading role in space exploration Taking a balanced look at the issues that have contributed to the decline of America s manned space program such as lack of political support and funding Johnson Freese offers not only a critique but also a plan for enhancing U S space security through cooperation rather than competition She begins with a brief overview of the history of international space development through four eras before Sputnik the space race after Apollo and globalization Then she focuses on how policy changes of the mid 1990s have changed the nation examining why the United States has grown obsessed with the development of space technology not just as a tool for globalization but as a route toward expanding

an already dominant arsenal of weapons Johnson Freese claims that these policy choices have greatly affected the attitudes and actions of other countries and in the fight to achieve security the United States has instead put itself at greater peril Johnson Freese explains complex technical issues in clear accessible terms and suggests a way forward that is comprehensive rather than partisan America is not the only country with space ambitions but it is unique in viewing space as a battlefield and the technological advancements of other nations as a dire threat Urgent and persuasive Space as a Strategic Asset underscores the danger of allowing our space program to languish and the crucial role of cooperation in protecting the security of our country and the world

Aerospace Technologies and Applications for Dual Use Pietro Finocchio, Ramjee Prasad, Marina Ruggieri, 2008 The events of past years have shown how the threat of both intentional and natural disasters could bring the civil and the military worlds closer in the conceivment and deployment of countermeasures as well as in the identification of effective strategies for enhancing the Planet safety and security In this frame the concept of dual use the set of technologies and applications that can be exploited for both civil and military purposes becomes a key topic In addition the aerospace industry is a strategic building block in the deployment of a network centric environment that aims at the global protection of the mankind Aerospace is a natural environment for dual use many of the related enabling technologies have first been developed for the military world and then applied to civil including commercial purposes On September 12 14 2007 an International Symposium was held in Rome joining the dual use approach with aerospace technology The event called experts and operators from the military and civil community belonging to industry scientific and governmental institutions The common aim was an effective convergence between the available and perspected technologies for the civil and military worlds as well as the conceivment of applications that can take the maximum benefit from the dual approach optimizing the available economic resources The Symposium included invited only contributions and an industrial panel The main results of the Symposium derived from key note speeches invited lectures panel discussions and conclusions have created the starting material to develop this edited book This book the first on the topic can be considered a milestone and a key tool aimed at driving the industrial scientific and institutional efforts of the international community to guarantee a pleasant and safe future to the whole Planet
