Duality In Optimization And Variational Inequalities:

   Duality in Optimization and Variational Inequalities C.j. Goh,2002-05-10 This comprehensive volume covers a wide range of duality topics ranging from simple ideas in network flows to complex issues in non convex optimization and multicriteria problems In addition it examines duality in the context of variational inequalities and vector variational inequalities as generalizations to optimization Duality in Optimization and Variational Inequalities is intended for researchers and practitioners of optimization with the aim of enhancing their understanding of duality It provides a wider appreciation of optimality conditions in various scenarios and under different assumptions It will enable the reader to use duality to devise more effective computational methods and to aid more meaningful interpretation of optimization and variational inequality problems   *Continuous Optimization and Variational Inequalities* Anurag Jayswal,Tadeusz Antczak,2022-09-13 The proposed book provides a comprehensive coverage of theory and methods in the areas of continuous optimization and variational inequality It describes theory and solution methods for optimization with smooth and non smooth functions for variational inequalities with single valued and multivalued mappings and for related classes such as mixed variational inequalities complementarity problems and general equilibrium problems The emphasis is made on revealing generic properties of these problems that allow creation of efficient solution methods Salient Features The book presents a deep wide ranging introduction to the theory of the optimal control of processes governed by optimization techniques and variational inequality Several solution methods are provided which will help the reader to develop various optimization tools for real life problems which can be modeled by optimization techniques involving linear and nonlinear functions The book focuses on most recent contributions in the nonlinear phenomena which can appear in various areas of human activities This book also presents relevant mathematics clearly and simply to help solve real life problems in diverse fields such as mechanical engineering management control behavior traffic signal industry etc This book is aimed primarily at advanced undergraduates and graduate students pursuing computer engineering and electrical engineering courses Researchers academicians and industry people will also find this book useful   **A Duality Approach to Gap Functions for Variational Inequalities and Equilibrium Problems** ,2006 This work aims to investigate some applications of the conjugate duality for scalar and vector optimization problems to the construction of gap functions for variational inequalities and equilibrium problems The basic idea of the approach is to reformulate variational inequalities and equilibrium problems into optimization problems depending on a fixed variable which allows us to apply duality results from optimization problems Based on some perturbations first we consider the conjugate duality for scalar optimization As applications duality investigations for the convex partially separable optimization problem are discussed Afterwards we concentrate our attention on some applications of conjugate duality for convex optimization problems in finite and infinite dimensional spaces to the construction of a gap function for variational inequalities and equilibrium problems To verify the properties in the definition of a gap function weak

and strong duality are used The remainder of this thesis deals with the extension of this approach to vector variational inequalities and vector equilibrium problems By using the perturbation functions in analogy to the scalar case different dual problems for vector optimization and duality assertions for these problems are derived This study allows us to propose some set valued gap functions for the vector variational inequality Finally by applying the Fenchel duality on the basis of weak orderings some variational principles for vector equilibrium problems are investigated *Contributions to the Theory of Variational Inequalities, Equilibrium and Optimization Problems Via Duality* Liana Cioban,2012 Journal of Nonlinear and Convex Analysis ,2007 Encyclopedia of Optimization Christodoulos A. Floudas,Panos M. Pardalos,2008-09-04 The goal of the Encyclopedia of Optimization is to introduce the reader to a complete set of topics that show the spectrum of research the richness of ideas and the breadth of applications that has come from this field The second edition builds on the success of the former edition with more than 150 completely new entries designed to ensure that the reference addresses recent areas where optimization theories and techniques have advanced Particularly heavy attention resulted in health science and transportation with entries such as Algorithms for Genomics Optimization and Radiotherapy Treatment Design and Crew Scheduling *Variational Methods in Partially Ordered Spaces* Alfred Göpfert,Hassan Riahi,Christiane Tammer,Constantin Zalinescu,2006-04-18 This book discusses basic tools of partially ordered spaces and applies them to variational methods in Nonlinear Analysis and for optimizing problems This book is aimed at graduate students and research mathematicians

Dynamic Networks and Evolutionary Variational Inequalities Patrizia Daniele,2006 This book offers a comprehensive analysis of dynamic networks and evolutionary variational inequalities a topic of growing prominence in the study of networks The extraordinary importance of networks in finance mathematics computer science and other areas is well known but the relatively new concept of dynamic networks is less well understood They become dynamic when the constitutive elements of the phenomena associated with the fixed geometry of networks are considered to be evolving over time Patrizia Daniele offers many numerical examples to illustrate the issues discussed and provides a broad appendix to enrich this challenging but deeply informative book Researchers students and practitioners in the areas of finance economics computer science and mathematics will find this volume an indispensable resource in understanding the use and development of networks in their disciplines Applications of Nonlinear Analysis Themistocles M. Panagiotopoulos,Panos M. Pardalos,2001-09-30 The book contains a collection of invited papers dedicated to the memory of two great mathematicians Gaetano Fichera and Panagis Panagiotopoulos The theme of the collection is centered around the seminal research of G Fichera on the Signorini problem hemivariational inequalities pioneered by Panagiotopoulos nonsmooth global optimization and regularity results for variational inequatities Audience The book is addressed to faculty graduate students and researchers in mathematical programming and engineering   *Variational Inequalities and Network Equilibrium Problems* F. Giannessi,A.
