Approximation Of Nonlinear Evolution Systems:

Approximation of Nonlinear Evolution Systems Jerome,1983-04-22 Approximation of Nonlinear Evolution Systems
Phase Transitions and Hysteresis Augusto Visintin,2006-11-15 1 Phase Transitions represented by generalizations of the classical Stefan problem This is studied by Kenmochi and Rodrigues by means of variational techniques 2 Hysteresis Phenomena Some alloys exhibit shape memory effects corresponding to a stress strain relation which strongly depends on temperature mathematical physical aspects are treated in Müller's paper In a general framework hysteresis can be described by means of hysteresis operators in Banach spaces of time dependent functions their properties are studied by Brokate 3 Numerical analysis Several models of the phenomena above can be formulated in terms of nonlinear parabolic equations Here Verdi deals with the most updated approximation techniques [Convergence of Galerkin Approximations for Operator Riccati Equations - a Nonlinear Evolution Equation Approach](#) Institute for Computer Applications in Science and Engineering,1988 An approximation and convergence theory is developed for Galerkin approximations to infinite dimensional operator Riccati differential equations formulated in the space of Hilbert Schmidt operators on a separable Hilbert space The Riccati equation is treated as a nonlinear evolution equation with dynamics described by a nonlinear monotone perturbation of a strongly coercive linear operator A generic approximation result is proved for quasi autonomous nonlinear evolution accretive operators which is then used to demonstrate the Hilbert Schmidt norm convergence of Galerkin approximations to the solution of the Riccati equation The application of these results are illustrated in the context of a linear quadratic optimal control problem for a one dimensional heat equation JHD *An Approximation Theory for the Identification of Nonlinear Distributed Parameter Systems* H. T. Banks,1988 An abstract approximation framework for the identification of nonlinear distributed parameter systems is developed Inverse problems for nonlinear systems governed by strongly maximal monotone operators satisfying a mild continuous dependence condition with respect to the unknown parameters to be identified are treated Convergence of Galerkin approximations and the corresponding solutions of finite dimensional approximating identification problems to a solution of the original infinite dimensional identification problem is demonstrated using the theory of nonlinear evolution systems and a nonlinear analog of the Trotter Kato approximation result for semigroups of bounded linear operators The nonlinear theory developed here is shown to subsume an existing linear theory as a special case It is also shown to be applicable to a broad class of nonlinear elliptic operators and the corresponding nonlinear parabolic partial differential equations to which they lead An application of the theory to a quasilinear model for heat conduction or mass transfer is discussed Keywords Nonlinear distributed systems Numerical analysis Inverse problems Approximation jhd *Scientific and Technical Aerospace Reports* ,1989-07 *Galerkin Approximation for Inverse Problems for Nonautonomous Nonlinear Distributed Systems* H.
