Archaeological Method:

Archaeological Method and Theory Linda Ellis, 2003-12-16 This Encyclopedia brings together the most recent scientific information on a collection of subjects that are too often and inconveniently treated in separate publications. It provides a survey of archaeological method and theory as well as the application of physical and biological sciences in archaeological research. Every aspect of archaeological work is represented from the discovery process to the ultimate disposition of materials. Thus the reader will find entries on subject matter covering disciplinary theory, legislation affecting the work of archaeologists, pre-excitation surveying, excavation methodology, on-site conservation techniques, post-excitation analysis. The rapid evolution of analytical technology is often superficially treated or not covered at all in textbooks or other commonly available sources. Here the latest refinements in techniques such as radiometric dating, stable isotopic analysis, and the PCR technique of DNA analysis are presented clearly and authoritatively. The discussion of these techniques is amplified by including results of the work of professionals conducting interdisciplinary research and by covering the methodological enhancements provided by the physical and natural sciences. Cultural property legislation, regardless of its country of origin, has affected how archaeologists conduct their work. This encyclopedia covers all major U.S. legislation developed for the protection of cultural property, including the recent Native American Graves Protection and Repatriation Act, and offers a substantial article on worldwide legislation concerning the reburial of human remains and its effects on the present and future practice of archaeology. Without some sort of conservation program at the point of excavation, valuable materials may be inadvertently contaminated or destroyed. Many simple and low-cost techniques to promote both sample integrity and long-term preservation for major classes of materials are described in this volume. Traditional treatments of method and theory usually focus on prehistoric periods and are limited in their geographic range. This volume includes discussions based on various historical periods on different continents as reflected in entries such as Historical Archaeology, Industrial Archaeology, Medieval Archaeology, and Classical Archaeology.

Archaeological Method Evzen Neustupny, 2009-07-23 The archaeological record consists of dead finds, remnants of human culture. The archaeologist relies on them to understand how past societies were organized and how they functioned. This book by the distinguished Czech scholar Evzen Neustupny considers the archaeological method, the way in which archaeologists translate mute objects into descriptions of a living past. The method involves a series of steps: an analysis of the archaeological record, a synthesis of the finds to generate formal archaeological structure, and the use of models derived from descriptions of observed human activity to explain these structures. Without models, archaeologists would have no way of interpreting their finds. The author also considers the relevance of archaeology of such concepts as induction and deduction, empirical research, and theory.

Archaeological Method, **Handbook of Archaeological Methods** Herbert D. G. Maschner, Christopher Chippindale, 2005 The Handbook of Archaeological Methods comprises 37 articles by leading archaeologists on the key methods used by

archaeologists in the field in analysis in theory building and in managing cultural resources The book is destined to become the key reference work for archaeologists and their advanced students on contemporary archaeological methods

VanPool,2003 Archaeological theory some say seems to have fragmented into a thousand fundamentalisms By working on a broader set of empirical issues than ever before archaeologists are indeed applying and refining a variety of perspectives Yet the editors of this volume make a case that it is appropriate for archaeologists to use a logical variety of theoretical structures to answer different kinds of questions combining approaches as necessary In that spirit of plurality contributors to this volume identify an important theoretical or methodological problem and present an argument regarding its solution They also provide a critical evaluation of the current state of archaeological method and theory illustrating that such recurrent issues as the role of agency and the importance of social considerations in the formation of archaeological research dominate current theoretical development By presenting both the range of important questions and a variety of answers this volume contributes to the essential tension that will further the growth of archaeological theory *Dug to Death* Adrian Praetzellis,2003-08-04 Dr Hannah Green heroine of Praetzellis s textbook as novel *Death by Theory* has really gotten herself into trouble this time The spunky archaeologist has been asked to manage the contract archaeology project at a historic site in New Zealand when the regular archaeological staff of University of Invercargill abruptly dies off On the scene Hannah discovers she needs to teach her team about research design survey methods archival research professional ethics curation and especially field safety if they are to complete the contract before young Mr Wallace levels the site in favor of a golf course With a cast of characters that includes Missy Jojo the Dog Faced Girl as lab supervisor erotic romance writer and field volunteer Elena Solara the ghost of socialite Bunny Wallace and shovelbum Rusty Spittle Praetzellis brief textbook as novel introduces students to the hows and whys of field methodology in an entertaining but informative way Ideal for your introductory archaeology classes and probably the only textbook you ll enjoy reading yourself *Methods & Aims in Archaeology* William Matthew Flinders Petrie,1904 **The Michigan archaeologist** ,1961 Traditional Methods of Pattern Designing Archibald H.
