## **Archaeological Obsidian Studies Method And Theory:**

*Archaeological Obsidian Studies* M. Steven Shackley, 2013-06-29 This volume is the third in the Advances in Archaeological and Museum Science series sponsored by the Society for Archaeological Sciences SAS The purpose of this series is to provide summaries of advances in various topics in archaeometry archaeological science environmental archaeology preservation technology and museum conservation The SAS exists to encourage interdisciplinary collaboration between archaeologists and colleagues in the natural and physical sciences SAS members are drawn from many disciplinary fields However they all share a common belief that physical science techniques and methods constitute an essential component of contemporary archaeological field and laboratory studies The series editors wish to thank the reviewers of each of the chapters in this volume for their excellent comments and suggestions We also wish to thank Chriss Jones for her invaluable assistance in the preparation of the texts for submission to the publisher xi Preface As noted in the introductory chapter this volume is the second major review of research progress in the study of archaeological obsidian An earlier book *Advances in Obsidian Glass Studies Archaeological and Geochemical Perspectives* appeared in 1976 A comparison of the treatment of topics reflected in this earlier work and that contained in this volume not only highlights important advances in the quality and depth of research on archaeological obsidian over more than a quarter of a century but also illustrates more generally some characteristics of developments in the archaeological science field in general *Archaeological Obsidian Studies* M. Steven Shackley, 1998 ***Archaeological Obsidian Studies* M. Steven Shackley, 2014-01-15** *X-Ray Fluorescence Spectrometry (XRF) in Geoarchaeology* M. Steven Shackley, 2010-10-17 Since the 1960s x ray fluorescence spectrometry XRF both wavelength and energy dispersive have served as the workhorse for non destructive and destructive analyses of archaeological materials Recently eclipsed by other instrumentation such as LA ICP MS XRF remains the mainstay of non destructive chemical analyses in archaeology particularly for volcanic rocks and most particularly for obsidian In a world where heritage and repatriation issues drive archaeological method and theory XRF remains an important tool for understanding the human past and will remain so for decades to come Currently there is no comprehensive book in XRF applications in archaeology at a time when the applications of portable XRF and desktop XRF instrumentation are exploding particularly in anthropology and archaeology departments worldwide The contributors to this volume are the experts in the field and most are at the forefront of the newest applications of XRF to archaeological problems It covers all relevant aspects of the field for those using the newest XRF technologies to deal with very current issues in archaeology

***Archaeological Chemistry* A Mark Pollard, Carl Heron, 2015-11-09** The application of chemistry within archaeology is an important and fascinating area It allows the archaeologist to answer such questions as what is this artefact made of where did it come from and how has it been changed through burial in the ground providing pointers to the earliest history of mankind *Archaeological Chemistry* begins with a brief description of the goals and history of archaeological science and the

place of chemistry within it It sets out the most widely used analytical techniques in archaeology and compares them in the light of relevant applications The book includes an analysis of several specific archaeological investigations in which chemistry has been employed in tracing the origins of or in preserving artefacts The choice of these investigations conforms to themes based on analytical techniques and includes chapters on obsidian ceramics glass metals and resins Finally it suggests a future role for chemical and biochemical applications in archaeology Archaeological Chemistry enables scientists to tackle the fundamental issues of chemical change in the archaeological materials in order to advance the study of the past It will prove an essential companion to students in archaeological science and chemistry field and museum archaeologists and all those involved in conserving human artefacts

**Archaeological Method and Theory** Linda Ellis,2003-12-16 This Encyclopedia brings together the most recent scientific information on a collection of subjects that are too often and inconveniently treated in separate publications It provides a survey of archaeological method and theory as well as the application of physical and biological sciences in archaeological research Every aspect of archaeological work is represented from the discovery process to the ultimate disposition of materials Thus the reader will find entries on subject matter covering disciplinary theory legislation affecting the work of archaeologists pre excavation surveying excavation methodology on site conservation techniques post excavation analysis The rapid evolution of analytical technology is often superficially treated or not covered at all in textbooks or other commonly available sources Here the latest refinements in techniques such as radiometric dating stable isotopic analysis and the PCR technique of DNA analysis are presented clearly and authoritatively The discussion of these techniques is amplified by including results of the work of professionals conducting interdisciplinary research and by covering the methodological enhancements provided by the physical and natural sciences Cultural property legislation regardless of its country of origin has affected how archaeologists conduct their work This encyclopedia covers all major U S legislation developed for the protection of cultural property including the recent Native American Graves Protection and Repatriation Act and offers a substantial article on worldwide legislation concerning the reburial of human remains and its effects on the present and future practice of archaeology Without some sort of conservation program at the point of excavation valuable materials may be inadvertently contaminated or destroyed Many simple and low cost techniques to promote both sample integrity and long term preservation for major classes of materials are described in this volume Traditional treatments of method and theory usually focus on prehistoric periods and are limited in their geographic range This volume includes discussions based on various historical periods on different continents as reflected in entries such as Historical Archaeology Industrial Archaeology Medieval Archaeology and Classical Archaeology

*Geochemical Evidence for Long-Distance Exchange* Michael D. Glascock,2002-12-30 Studies of prehistoric exchange of goods provide information about the types of economic interaction social organization or political structures in which prehistoric peoples were engaged Long distance exchange is a special situation where the materials exchanged crossed

significant boundaries whether they were geographic social political or otherwise By examining the types and quantities of goods exchanged along with the directions and distances they moved archaeologists are able to examine the dynamic properties of exchange systems i e how they operate and why they undergo change The purpose of this volume is to present a number of case studies of long distance exchange from around the world which demonstrate the use of geochemical analysis of artifacts to find evidence of exchange More important than the use of analytical technique employed or the types of artifacts studied are the interpretations themselves which illustrate that exchange studies are maturing and helping archaeologists to develop more accurate models of exchange

*The Oxford Companion to Archaeology* Neil Asher Silberman, 2012-11 The second edition of *The Oxford Companion to Archaeology* is a thoroughly up to date resource with new entries exploring the many advances in the field since the first edition published in 1996 In 700 entries the second edition provides thorough coverage to historical archaeology the development of archaeology as a field of study and the way the discipline works to explain the past In addition to these theoretical entries other entries describe the major excavations discoveries and innovations from the discovery of the cave paintings at Lascaux to the deciphering of Egyptian hieroglyphics and the use of luminescence dating Recent developments in methods and analytical techniques which have revolutionized the ways excavations are performed are also covered as well as new areas within archeology such as cultural tourism and major new sites which have expanded our understanding of prehistory and human developments through time In addition to significant expansion first edition entries have been thoroughly revised and updated to reflect the progress that has been made in the last decade and a half

*Theory, Method, and Practice in Modern Archaeology* Robert J. Jeske, Douglas K. Charles, 2003-03-30 This book presents 18 essays by leading scholars covering mortuary analysis the archaeology of foraging and agricultural societies cultural evolution and archaeological method and theory which transcend the processual postprocessual debate in archaeology and provide examples of how archaeologists think about and go about studying the past As archaeology encounters the 21st century debate over the nature of the discipline dominates professional discourse Archaeologists are embattled over isms processualism postprocessualism scientism and humanism are ubiquitous buzzwords in the literature Yet archaeology is a craft practiced by individuals learned from and influenced by other individuals Sometimes a person through sheer force of intellectual spirit rises above the debate to make a mark on the field in ways that cross out schools paradigms and factions It is fitting to look back at the influence one such individual has had on archaeological methods theory data collection and syntheses over the last half century This volume draws on the experience of students and colleagues who worked with and were strongly influenced by James A Brown s approach to the past The volume is divided into five categories each reflecting one distinctive facet of Brown s affect on archaeology mortuary analysis foraging and horticultural societies complex agriculturalists proto historic and historic societies and method and theory These diverse categories with articles by archaeologists of many backgrounds are drawn together by the threads of Brown s

intellectual legacy Not all authors here are in agreement with Brown s views on their subjects but all acknowledge that his work in the area sets a standard that needs to be met if one is to succeed Journal of Archaeological Science Society for Archaeological Sciences (U.S.),2002 **Kansas Archaeology** Robert J.
