Kim, 2000-01-10 The increased computational power and software tools available to engineers have increased the use and dependence on modeling and computer simulation throughout the design process These tools have given engineers the capability of designing highly complex systems and computer architectures that were previously unthinkable Every complex design project from integrated circuits to aerospace vehicles to industrial manufacturing processes requires these new methods This book fulfills the essential need of system and control engineers at all levels in understanding modeling and simulation This book written as a true text reference has become a standard sr graduate level course in all EE departments worldwide and all professionals in this area are required to update their skills The book provides a rigorous mathematical foundation for modeling and computer simulation It provides a comprehensive framework for modeling and simulation integrating the various simulation approaches It covers model formulation simulation model execution and the model building process with its key activities model abstraction and model simplification as well as the organization of model libraries Emphasis of the book is in particular in integrating discrete event and continuous modeling approaches as well as a new approach for discrete event simulation of continuous processes The book also discusses simulation execution on parallel and distributed machines and concepts for simulation model realization based on the High Level Architecture HLA standard of the Department of Defense Presents a working foundation necessary for compliance with High Level Architecture HLA standards Provides a comprehensive framework for continuous and discrete event modeling and simulation Explores the mathematical foundation of simulation modeling Discusses system morphisms for model abstraction and simplification Presents a new approach to discrete event simulation of continuous processes Includes parallel and distributed simulation of discrete event models Presents a concept to achieve simulator interoperability in the form of the DEVS Bus

Transactions of the Society for Computer Simulation , 1998 **First International Workshop on Distributed Interactive Simulation and Real Time Applications** Azzedine Boukerche, Sajal K. Das, Viktor Èmmanuilovich Malyshkin, 1997 **Enabling Technology for Simulation Science** , 1997 Improving Air Force Purchasing and Supply Management of Spare Parts Robert W. Bickel, 2003 This research provides the Air Force with a methodology for evaluating various strategies to improve the procurement of spare parts and applies the methodology to F100 engine parts The author uses exploratory analysis techniques and system dynamic modeling to gain a better understanding of the effectiveness of various supplier management policies including identifying those policy levers most effective in improving various measures

of interest The research shows that policy and organizational changes in the purchasing and supply management PSM process have the potential to improve effectiveness while maintaining or lowering costs It also demonstrates that a system dynamic model can be an important contribution to defining discussing and understanding the complex interactions among policy levers and outcome measures particularly in enhancing PSM efficiency and effectiveness
