Applied Stochastic Control of Jump Diffusions Bernt Øksendal, Agnès Sulem, 2007-04-26 Here is a rigorous introduction to the most important and useful solution methods of various types of stochastic control problems for jump diffusions and its applications Discussion includes the dynamic programming method and the maximum principle method and their relationship The text emphasises real world applications primarily in finance Results are illustrated by examples with end of chapter exercises including complete solutions The 2nd edition adds a chapter on optimal control of stochastic partial differential equations driven by Lévy processes and a new section on optimal stopping with delayed information Basic knowledge of stochastic analysis measure theory and partial differential equations is assumed

Applied Stochastic Control of Jump Diffusions Bernt Øksendal, Agnès Sulem, 2019-04-17 The main purpose of the book is to give a rigorous introduction to the most important and useful solution methods of various types of stochastic control problems for jump diffusions and their applications Both the dynamic programming method and the stochastic maximum principle method are discussed as well as the relation between them Corresponding verification theorems involving the Hamilton Jacobi Bellman equation and or quasi variational inequalities are formulated The text emphasises applications mostly to finance All the main results are illustrated by examples and exercises appear at the end of each chapter with complete solutions This will help the reader understand the theory and see how to apply it The book assumes some basic knowledge of stochastic analysis measure theory and partial differential equations The 3rd edition is an expanded and updated version of the 2nd edition containing recent developments within stochastic control and its applications Specifically there is a new chapter devoted to a comprehensive presentation of financial markets modelled by jump diffusions and one on backward stochastic differential equations and convex risk measures Moreover the authors have expanded the optimal stopping and the stochastic control chapters to include optimal control of mean field systems and stochastic differential games

Hanson,2007 An applied compact introductory survey of Markov stochastic processes and control in continuous time is presented The presentation is in tutorial stages beginning with deterministic dynamical systems for contrast and continuing on to perturbing the deterministic model with diffusions using Wiener processes Then jump perturbations are added using simple Poisson processes constructing the theory of simple jump diffusions Next marked jump diffusions are treated using compound Poisson processes to include random marked jump amplitudes in parallel with the equivalent Poisson random measure formulation Otherwise the approach is quite applied using basic principles with no abstractions beyond Poisson random measure This treatment is suitable for those in classical applied mathematics physical sciences quantitative finance and engineering but have trouble getting started with the

abstract measure theoretic literature The approach here builds upon the treatment of continuous functions in the regular calculus and associated ordinary differential equations by adding non smooth and jump discontinuities to the model Finally the stochastic optimal control of marked jump diffusions is developed emphasizing the underlying assumptions The survey concludes with applications in biology and finance some of which are canonical dimension reducible problems and others are genuine nonlinear problems
