Apprenticeship Of A Mathematician:

The Apprenticeship of a Mathematician Andre Weil, 2012-12-06 Extremely readable recollections of the author A rare testimony of a period of the history of 20th century mathematics Includes very interesting recollections on the author s participation in the formation of the Bourbaki Group tells of his meetings and conversations with leading mathematicians reflects his views on mathematics The book describes an extraordinary career of an exceptional man and mathematicians Strongly recommended to specialists as well as to the general public EMS Newsletter 1992 This excellent book is the English edition of the author s autobiography This very enjoyable reading is recommended to all mathematicians Acta Scientiarum Mathematicarum 1992

Apprenticeship in Critical Ethnographic Practice Jean Lave, 2011-04-15 In this extended meditation Jean Lave interweaves analysis of the process of apprenticeship among the Vai and Gola tailors of Liberia with reflections on the evolution of her research on those tailors in the late 1970s In so doing she provides both a detailed account of her apprenticeship in the art of sustained fieldwork and an insightful overview of thirty years of changes in the empirical and theoretical facets of ethnographic practice Examining the issues she confronted in her own work Lave shows how the critical questions raised by ethnographic research erode conventional assumptions altering the direction of the work that follows As ethnography takes on increasing significance to an ever widening field of thinkers on topics from education to ecology this erudite but accessible book will be essential to anyone tackling the question of what it means to undertake critical and conceptually challenging fieldwork Apprenticeship in Critical Ethnographic Practice explains how to seriously explore what it means to be human in a complex world and why it is so important

New Directions in Two-Year College Mathematics Donald J. Albers, Stephen B. Rodi, Ann E. Watkins, 2012-12-06 by Donald J Albers ix INTRODUCTION In July of 1984 the first national conference on mathematics education in two year colleges was held at Menlo College The conference was funded by the Alfred P Sloan Foundation Two year colleges account for more than one third of all undergraduate enrollments in mathematics and more than one half of all college freshmen are enrolled in two year colleges These two facts alone suggest the importance of mathematics education in two year colleges particularly to secondary schools four year colleges and universities For a variety of reasons four year colleges and universities are relatively unaware of two year colleges Arthur Cohen who was a participant at the New Directions conference warns Four year colleges and universities ignore two year colleges at their own peril Ross Taylor another conference participant encouraged two year college faculty to be ever mindful of their main source of students secondary schools and to work hard to strengthen their ties with them There are many other reasons why it was important to examine two year college mathematics from a national perspective 1 Over the last quarter century no other sector of higher education has grown so rapidly as have two year colleges Their enrollments tripled in the 60 s doubled in the 70 s and continue to increase rapidly in the 80 s x 2 Twenty five years ago two year colleges accounted for only one seventh of all

Apprenticeship Training Dietmar Harhoff,Thomas J. Kane,1993 Much of the current discussion promoting apprenticeship programs in the U S proceeds as if it is simply a matter of historical accident or lack of imagination which has hindered

human capital investment by U S firms However the cause may be rooted more deeply in our labor market institutions This paper discusses the structure of incentives undergirding the German system of apprenticeship training Many German firms

face large net costs of apprenticeship training Yet they continue to provide such training in spite of considerable worker

turnover upon completion of the training The simplest human capital model suggests that employers would be willing to

finance only firm specific training Rather than engage in a futile debate over the general or specific nature of the skills being provided we first describe and evaluate 3 characteristics of the German labor market which may lead firms to accept part of

the cost of general training even in the face of worker turnover We then attempt to understand why German workers and

firms may be more willing to invest even in firm specific skills than in the U S Finally we discuss some implications of these results for the current vocational training debate in the U S *Collegian* ,1913
