**Approximating Countable Markov Chains** David Freedman, 2012-12-06 A long time ago I started writing a book about Markov chains Brownian motion and diffusion I soon had two hundred pages of manuscript and my publisher was enthusiastic Some years and several drafts later I had a thousand pages of manuscript and my publisher was less enthusiastic So we made it a trilogy Markov Chains Brownian Motion and Diffusion Approximating Countable Markov Chains familiarly MC B if you can follow Sections 10 4 to 10 9 of Markov Chains you re in The first two books are quite independent of one another and completely independent of this one which is a monograph explaining one way to think about chains with instantaneous states The results here are supposed to be new except when there are specific disclaimers It s written in the framework of Markov chains we wanted to reprint in this volume the MC chapters needed for reference but this proved impossible Most of the proofs in the trilogy are new and I tried hard to make them explicit The old ones were often elegant but I seldom saw what made them go With my own I can sometimes show you why things work And as I will argue in a minute my demonstrations are easier technically If I wrote them down well enough you may come to agree

**Selected Works of A. N. Kolmogorov** A.N. Shiriyayev, 1992-02-29 The creative work of Andrei N Kolmogorov is exceptionally wide ranging In his studies on trigonometric and orthogonal series the theory of measure and integral mathematical logic approximation theory geometry topology functional analysis classical mechanics ergodic theory superposition of functions and in formation theory he solved many conceptual and fundamental problems and posed new questions which gave rise to a great deal of further research Kolmogorov is one of the founders of the Soviet school of probability theory mathematical statistics and the theory of turbulence In these areas he obtained a number of central results with many applications to mechanics geophysics linguistics and biology among other subjects This edition includes

Kolmogorov's most important papers on mathematics and the natural sciences. It does not include his philosophical and pedagogical studies, his articles written for the Bolshaya Sovetskaya Entsiklopediya, his papers on prosody and applications of mathematics, or his publications on general questions. The material of this edition was selected and compiled by Kolmogorov himself. The first volume consists of papers on mathematics and also on turbulence and classical mechanics. The second volume is devoted to probability theory and mathematical statistics. The focus of the third volume is on information theory and the theory of algorithms.

*Approximate Iterative Algorithms* Anthony Louis Almudevar, 2014-02-18. Iterative algorithms often rely on approximate evaluation techniques which may include statistical estimation, computer simulation, or functional approximation. This volume presents methods for the study of approximate iterative algorithms, providing tools for the derivation of error bounds and convergence rates, and for the optimal design of such algorithms.

Constructive Computation in Stochastic Models with Applications Quan-Lin Li, 2011-02-02. Constructive Computation in Stochastic Models with Applications. The RG Factorizations provides a unified constructive and algorithmic framework for numerical computation of many practical stochastic systems. It summarizes recent important advances in computational study of stochastic models from several crucial directions such as stationary computation, transient solution, asymptotic analysis, reward processes, decision processes, sensitivity analysis, as well as game theory. Graduate students, researchers, and practicing engineers in the field of operations research, management sciences, applied probability, computer networks, manufacturing systems, transportation systems, insurance, and finance, risk management, and biological sciences will find this book valuable. Dr. Quan Lin Li is an Associate Professor at the Department of Industrial Engineering of Tsinghua University, China.

**Principles of Formal Quantitative Analysis** Nathalie Bertrand, Clemens Dubslaff, Sascha Klüppelholz, 2025-08-29. This Festschrift is dedicated to Christel Baier in recognition of her contributions to the field of theoretical computer science, particularly in formal methods, temporal logics, model checking, and probabilistic systems. After earning her doctorate from the University of Mannheim, Christel Baier held research and professorial positions in Mannheim and Bonn. Since 2006, she has been a full professor of Algebraic and Logical Foundations of Computer Science at Technische Universität Dresden, where she currently serves as the Dean of the Faculty of Computer Science. In 2011, she was elected to the Academia Europaea. She was the Editor in Chief of *Acta Informatica* from 2015 to 2022 and received an honorary doctorate from RWTH Aachen University in 2022. Among her many notable research achievements, Christel Baier has shaped the foundations and practical applications of system verification. She pioneered probabilistic model checking, advanced techniques for model checking of continuous-time Markov chains, and coauthored the standard textbook *Principles of Model Checking*. Beyond her research contributions, she is widely respected within the scientific community. Her service has included invited talks, membership in key steering and program

committees and organizing scientific events Christel Baier has mentored and guided many students and fellow scientists They appreciate her way of approaching every task with remarkable persistence focus and diligence Many of these collaborators were pleased to contribute to this volume and to celebrate joint work and successes
