expert Jack Copeland provides the background and guides the reader through the selection About Alan Turing Alan Turing FRS OBE 1912 1954 studied mathematics at King s College Cambridge He was elected a Fellow of King s in March 1935 at the age of only 22 In the same year he invented the abstract computing machines now known simply as Turing machines on which all subsequent stored program digital computers are modelled During 1936 1938 Turing continued his studies now at Princeton University He completed a PhD in mathematical logic analysing the notion of intuition in mathematics and introducing the idea of oracular computation now fundamental in mathematical recursion theory An oracle is an abstract device able to solve mathematical problems too difficult for the universal Turing machine In the summer of 1938 Turing returned to his Fellowship at King s When WWII started in 1939 he joined the wartime headquarters of the Government Code and Cypher School GC CS at Bletchley Park Buckinghamshire Building on earlier work by Polish cryptanalysts Turing contributed crucially to the design of electro mechanical machines bombes used to decipher Enigma the code by means of which the German armed forces sought to protect their radio communications Turing s work on the version of Enigma used by the German navy was vital to the battle for supremacy in the North Atlantic He also contributed to the attack on the cyphers known as Fish Based on binary teleprinter code Fish was used during the latter part of the war in preference to morse based Enigma for the encryption of high level signals for example messages from Hitler and other members of the German High Command It is estimated that the work of GC CS shortened the war in Europe by at least two years Turing received the Order of the British Empire for the part he played In 1945 the war over Turing was recruited to the National Physical Laboratory NPL in London his brief to design and develop an electronic computer a concrete form of the universal Turing machine Turing s report setting out his design for the Automatic Computing Engine ACE was the first relatively complete specification of an electronic stored program general purpose digital computer Delays beyond Turing s control resulted in NPL s losing the race to build the world s first working electronic stored program digital computer an honour that went to the Royal Society Computing Machine Laboratory at Manchester University in June 1948 Discouraged by the delays at NPL Turing took up the Deputy Directorship of the Royal Society Computing Machine Laboratory in that year Turing was a founding father of modern cognitive science and a leading early exponent of the hypothesis that the human brain is in large part a digital computing machine theorising that the cortex at birth is an unorganised machine which through training becomes organised into a universal machine or something like it He also pioneered Artificial Intelligence Turing spent the rest of his short career at Manchester University being appointed to a specially created Readership in the Theory of Computing in May 1953 He was elected a Fellow of the Royal Society of London in March 1951 a high honour **Computer**

Paul Atkinson,2010-08-15 The pixelated rectangle we spend most of our day staring at in silence is not the television as many long feared but the computer the ubiquitous portal of work and personal lives At this point the computer is almost so common we don t notice it in our view It s difficult to envision that not that long ago it was a gigantic room sized structure

only to be accessed by a few inspiring as much awe and respect as fear and mystery Now that the machine has decreased in size and increased in popular use the computer has become a prosaic appliance little more noted than a toaster These dramatic changes from the daunting to the ordinary are captured in *Computer by design* historian Paul Atkinson Here Atkinson chronicles the changes in physical design of the computer and shows how these changes in design are related to changes in popular attitude Atkinson is fascinated by how the computer has been represented and promoted in advertising For example in contrast to ads from the 1970s and 80s today s PC is very PC genderless and largely status free Computer also considers the role of the computer as a cultural touchstone as evidenced by its regular appearance in popular culture including the iconography of the space age HAL from 2001 A Space Odyssey James Bond s gadgetry and Stars War and Star Trek Computer covers many issues ignored by other histories of computing which have focused on technology and the economics involved in their production but rarely on the role of fashion in the physical design and promotion of computers and their general reception The book will appeal to professionals and students of design and technology as well as those interested in the history of computers and how they have shaped and been shaped by our lives

**Cooperative Work and Coordinative Practices** Kjeld Schmidt,2011-01-27 Information technology has been used in organisational settings and for organisational purposes such as accounting for a half century but IT is now increasingly being used for the purposes of mediating and regulating complex activities in which multiple professional users are involved such as in factories hospitals architectural offices and so on The economic importance of such coordination systems is enormous but their design often inadequate The problem is that our understanding of the coordinative practices for which these systems are developed is deficient leaving systems developers and software engineers to base their designs on commonsensical requirements analyses The research reflected in this book addresses these very problems It is a collection of articles which establish a conceptual foundation for the research area of Computer Supported Cooperative Work

*A Bibliographic Guide to the History of Computing, Computers, and the Information Processing Industry* ,1990-05-21 As millions of people have been exposed to computing through the tremendous growth of microcomputers there has developed an increasing appreciation of the history of data processing which dates back many decades before the arrival of the computer Stretching back to at least the 1860s such early technologies as adding machines punch cards and the office appliance industry are now being recognized for their place in the history of the information processing industry This work brings together a comprehensive list of sources that offer a general introduction to the literature of the industry Divided into nine chapters covering topics and historical periods the bibliography provides an annotated list of published materials describing both the history of the industry and significant items of general interest Each chapter is introduced with a short review of historically important issues and comments on the literature and contains contemporary publications as well as more recent material To give the work a continuing usefulness ongoing publications such as computer magazines are highlighted Entries are grouped under nearly 100 subheadings

covering such material as contemporary descriptions of hardware and software of the past seminal technical papers industry surveys programming languages significant individuals and companies and the role of Japan and microcomputing All citations are annotated with a brief summary of either the work s contents or its historical importance while two indexes provide both subject references and author citations This bibliography will be an important reference source for courses in the history of data processing and business history and a useful addition to public college and university libraries **Turing**
