K.D.R. Setchell, David Kritchevsky, Padmanabhan P. Nair, 2012-12-06 Over a decade has elapsed since the last volume in this series was published At that time we considered that we had comprehensively covered all aspects relating to bile acid chemistry and physiology However major strides have been made in our understanding of the physiology and pathophysiology of bile acids due largely to the great advances which have taken place in analytical technology As a result the need to document these advances was felt acutely and therefore this volume is devoted to methodologies in bile acid analysis and their applications This volume includes twelve chapters written by prominent scientists in the field of bile acid research The initial chapter discusses techniques of extraction and isolation of bile acids from biological fluids It is followed by descriptions of physical methods of analysis and discussions of the way these techniques have been applied in the field of

bile acid research Of practical value is the inclusion of a comprehensive list of spectra obtained for refer ences by nuclear magnetic resonance spectroscopy and mass spectrometry These chapters are followed by reviews of biological methods of immuno assay and bioluminescence Specific applications of these techniques are then addressed in contributions relating to bile acid analysis of tissue serum urine and feces With this integrated approach we have attempted to provide a volume which represents a comprehensive review of the analytical field of bile acids while also serving as a useful reference book for those workers involved in bile acid analysis
