

Medical Definition of Alcoholism: A Clinical Perspective on the Disorder

Alcoholism is a chronic disorder characterized by a strong craving for alcohol, loss of control over drinking, physical dependence on alcohol, and tolerance to its effects.

The condition is marked by excessive and compulsive consumption of alcohol despite the negative consequences on one's health, relationships, and overall well-being.

Individuals with alcoholism may experience withdrawal symptoms when they attempt to stop or reduce their drinking.

Alcoholism can lead to serious medical conditions such as liver disease, cardiovascular problems, and neurological disorders.

Treatment for alcoholism often involves a combination of therapy, support groups, medications, and lifestyle changes aimed at promoting sobriety and addressing underlying psychological issues.

It is important for individuals struggling with alcoholism to seek professional help in order to address the disorder effectively and improve their overall quality of life.
