highly repetitive jobs from customer service and translation to coding video editing administrative tasks and accounting. These roles share traits of standardization and repetition which once relied on experience or patience but now appear fragile against algorithms. AI not only provides faster and more accurate answers but also simulates empathy, generates content, and automates complex processes. The author reminds readers that survival lies not in clinging to old skills but in becoming commanders of machines, mastering cross-domain integration, decision making, and creativity, and showing human insight where AI cannot reach. This book is both a warning and a guide helping readers find new footholds in times of upheaval.
