100 Data Interpretation Questions In Paediatrics For Mrcpmrcpch:

100 Data Interpretation Questions in Paediatrics for MRCP/MRCPC Nagi Barakat, 1999 This book contains 100 data interpretation questions plus their associated explanatory answers for the MRCP MRCPC in paediatrics The questions and answers have been grouped into ten papers of ten questions to resemble the examination itself Each practice paper of ten questions contains a representative selection of questions from different areas of paediatrics Also included are figures including ECGs growth charts and audiometry This unique book will prove invaluable to all MRCP and MRCPC candidates for both the clinical and oral exams The cases are based on real life examples

Problem-Based Learning in Medicine: A Practical Guide for Students and Teachers Timothy David, 1999-02-01 The essence of problem based learning is that a group of eight to 10 students decide for themselves what they need to study after discussing trigger material such as a written problem After a few days of self study they meet to share compare and relate what they have found to the original trigger matter and to see if they have covered enough ground Problem based learning as currently employed in medical education originated at McMaster University in Canada and has been adopted by about one quarter of all medical schools in the US and about one half of those in Canada with Europe and the rest of the world catching up rapidly Despite the widespread use of problem based learning in higher education including medicine dentistry health sciences law economics and mathematics there has until now been a serious lack of published practical advice of both students and teachers This is a how to do it book intended for students teachers and those still at school who are trying to decide whether or not to choose a medical school that uses problem based learning or one that has a more traditional approach to medical education After a brief introduction the book explains what problem based learning is and how it works and how it fits in with what we know about how adults learn There are chapters on how to design problems and trigger material how a tutorial group works and how self assessment peer assessment and tutor assessment are undertaken There is practical advice for students e g how to make the transition from a traditional school education to a much more self directed kind of activity in which it might be easy to get lost without some practical guidance at the outset There is practical advice for teachers who have the job of helping students adapt and cope with the sudden change of no longer being told what to do The book concludes with chapters on serious pitfalls and a brief discussion of what problem based learning can be expected to achieve
