Cometary Plasma Processes Geophysical Monograph Vol 61:

Cometary Plasma Processes Alan D. Johnstone, 1991-01-08 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 61 Since Explorer 1 discovered the Earth's radiation belts more than thirty years ago there have been many opportunities to show the value of in situ observations over remote sensing when it comes to an understanding of the space plasma environment When one of the inner solar system's regular visitors was due to make its once in a lifetime appearance in 1986 the opportunity was too important to be missed For not only is comet Halley one of the most reliable comets it is also nearly two orders of magnitude larger than any other comet with a known period Well before there was any visible trace of Halley's comet in the night sky three of the big four space agencies were banking on that reliability and were preparing five spacecraft to make the journey to intercept the comet Such activity acted as a spur to the ingenuity of the fourth agency who found a way to redirect one of their long serving spacecraft and to win the race to be the first to a comet albeit the smaller and at the time virtually unknown Giacobini Zinner Although a healthy spirit of competition infused the scientific and engineering teams working on the project at various levels what mattered in the end was the global cooperation between the agencies and many ground based observers which for example enabled Giotto to reach the comet with one tenth of the targetting error that had originally been predicted

Advances In Geosciences (A 6-volume Set) - Volume 25: Planetary Science (Ps) Anil Bhardwaj, S A Haider, Paul Hartogh, Takashi Ito, 2011-07-13 This invaluable volume set of Advances in Geosciences continues the excellent tradition of the Asia Oceania scientific community in providing the most up to date research results on a wide range of geosciences and environmental science The information is vital to the understanding of the effects of climate change extreme weathers on the most populated regions and fastest moving economies in the world Besides these volumes also highlight original papers from many prestigious research institutions which are conducting cutting edge studies in atmospheric physics hydrological science and water resource ocean science and coastal study planetary exploration and solar system science seismology tsunamis upper atmospheric physics and space science

Comets II M. Festou, H. U. Keller, Harold A. Weaver, 2004-11 The study of comets is a field that has seen tremendous advances in recent years far surpassing the knowledge reflected in the original Comets volume published as part of the Space Science Series in 1982 This new volume with more than seventy contributing authors represents the first complete overview of comet science in more than a decade and contains the most extensive collection of knowledge yet assembled in the field Comets II situates comet science in the global context of astrophysics for the first time by beginning with a series of chapters that describe the connection between stars and planets It continues with a presentation of the formation and evolution of planetary systems enabling the reader to clearly see the key role played in our own solar system by the icy planetesimals that were the seeds of the giant planets and transneptunian objects The book presents the key results obtained during the 1990s in particular those collected during the apparition of the exceptional comets C Hyakutake

and C Hale Bopp in 1996 1997 The latest results obtained from the in situ exploration of comets P Borrelly and P Wild 2 are also discussed in detail Each topic of is designed to be accessible to students or young researchers looking for basic yet detailed complete and accurate information on comet science With its emphasis on the origin of theories and the future of research Comets II will enable scientists to make connections across disciplinary boundaries and will set the stage for discovery and new understanding in the coming years

Wave-particle Interaction and Energization in Plasmas P. K. Shukla,1994 **Introduction to Space Physics** Margaret G. Kivelson,Christopher T. Russell,1995-04-28 All aspects of space plasmas in the Solar System are introduced and explored in this text for senior undergraduate and graduate students Introduction to Space Physics provides a broad yet selective treatment of the complex interactions of the ionized gases of the solar terrestrial environment The book includes extensive discussion of the Sun and solar wind the magnetized and unmagnetized planets and the fundamental processes of space plasmas including shocks plasma waves ULF waves wave particle interactions and auroral processes The text devotes particular attention to space plasma observations and integrates these with phenomenological and theoretical interpretations Highly coordinated chapters written by experts in their fields combine to provide a comprehensive introduction to space physics Based on an advanced undergraduate and graduate course presented in the Department of Earth and Space Sciences at the University of California Los Angeles the text will be valuable to both students and professionals in the field

The Century of Space Science J.A. Bleeker,Johannes Geiss,M. Huber,2012-12-06 One of the most attractive features of the young discipline of Space Science is that many of the original pioneers and key players involved are still available to describe their field Hence at this point in history we are in a unique position to gain first hand insight into the field and its development To this end The Century of Space Science a scholarly authoritative reference book presents a chapter by chapter retrospective of space science as studied in the 20th century The level is academic and focuses on key discoveries how these were arrived at their scientific consequences and how these discoveries advanced the thoughts of the key players involved With over 90 world class contributors such as James Van Allen Cornelis de Jager Eugene Parker Reimar L st and Ernst Stuhlinger and with a Foreword by Lodewijk Woltjer past ESO Director General this book will be immensely useful to readers in the fields of space science astronomy and the history of science Both academic institutions and researchers will find that this major reference work makes an invaluable addition to their collection

Comparative Magnetospheres X. Blanco-Cano,Christopher T. Russell,2004 Indian Journal of Radio & Space Physics ,1994 *Subject Guide to Books in Print* ,2001 **Planetary Ionospheres and Magnetospheres** COSPAR. Scientific Assembly,1997 Paperback The study of planetary Ionospheres and Magnetospheres has advanced dramatically in the past two decades both through careful and increasingly sophisticated analysis of data returned by space probes and through theoretical studies supplemented by extensive computer simulations The thirty one papers presented in this volume on planetary ionospheres and magnetospheres include papers on the ionospheres and magnetospheres of Venus

Mars Jupiter Pluto and comet Halley Papers are included that describe observations from many spacecraft missions to the planets and to small solar system bodies This volume is divided into three sections dealing with Venus and Mars the gas giant planets with emphasis on Jupiter and the small bodies in the solar system Pluto Io comets In the first section the emphasis is on Mars 9 out of 11 papers providing background relevant to some of the upcoming missions that will target this planet in the closing year

Plasma Environments of Non-magnetic Planets Tamás I. Gombosi,1993 Hardbound The symposium consisted of 75 invited and contributed presentations about controversial and poorly understood phenomena related to the plasma environments of comets weakly magnetized and non magnetized solar system bodies with significant atmospheres Understanding of the major physical and chemical processes controlling cometary plasma environments has greatly improved following the historic spacecraft encounters with comets Halley and Giacobini Zinner Pioneer Venus has provided detailed information about the plasma environment of Venus over a full solar cycle The Phobos mission has also significantly enhanced our understanding of the Martian magnetosphere and its solar wind interaction There is renewed interest in the solar wind interaction with our Moon and efforts are continuing toward further exploration of the plasma environments of Io Titan and Triton Although these bodies have vastly different plasma environments there are several
