Drylands End:

Dryland's End Felice Picano, 1995 Set five thousand years in the future Dryland s end takes place in a fabulous techno empire ruled by intelligent powerful women While the Matriarchy has ruled for over two thousand years and altered human language thought and society it is now unraveling Military rivalries religious fanaticism and economic competition threaten to destroy the empire from within just as a fierce rebellion also threatens human existence throughout the galaxy P 4 of cover

Confronting Drought in Africa's Drylands Raffaello Cervigni, Michael Morris, 2016-05-09 Drylands are at the core of Africa s development challenge Drylands make up about 43 percent of the region s land surface account for about 75 percent of the area used for agriculture and are home to about 50 percent of the population including a disproportionate share of the poor Due to complex interactions among many factors vulnerability in drylands is high and rising jeopardizing the long term livelihood prospects for hundreds of millions of people Climate change which is expected to increase the frequency and severity of extreme weather events will exacerbate this challenge African governments and their partners in the international development community stand ready to tackle the challenges confronting drylands but important questions remain unanswered about how the task should be undertaken Do dryland environments contain enough resources to generate the food jobs and income needed to support sustainable livelihoods for a fast growing population If not can injections of external resources make up the deficit Or is the carrying capacity of drylands so limited that outmigration should be encouraged Based on analysis of current and projected future drivers of vulnerability and resilience the report uses an original modeling framework to identify promising interventions quantify their likely costs and benefits and describe the policy trade offs that will need to be addressed By 2030 economic growth leading to structural change will allow some of the people living in drylands to transition to non agriculture based livelihood strategies reducing their vulnerability Many others will continue to rely on livestock keeping and crop farming For the latter group a number of best bet interventions have the potential to make a significant difference in reducing vulnerability and increasing resilience This report evaluates the opportunities and challenges associated with these interventions and it draws a number of conclusions that have important implications for policy making

Ecohydrological Response of Dryland Ecosystems to Aridification: The Role of Runoff Water Redistribution Borja Rodríguez Lozano, 2024-11-25 In general according to our results we may conclude that the effect of runoff water redistribution by increasing water and related nutrients for vegetation and underlying soil microbial communities buffer the expected negative response of drylands to aridification The magnitude of this effect depends on the interplay with other environmental factors controlling soil hydrology such as lithology legacy on soil properties Finally we found that this positive buffer effect could be counterbalance in areas of high human disturbance as the negative effects of degradation on soils and vegetation could exacerbate runoff and nutrients

losses and limit the capacity of the remaining vegetation to trap and retain the runoff water and related nutrients The new set of allometric equations developed in this thesis for the quantification of green biomass and the proposed ecohydrological index can be easily combined to provide a comprehensive coupled assessment of vegetation dynamics and the related processes of water and nutrient transfer from open spaces to plants Thus they constitute crucial tools for evaluating the effects of runoff water redistribution across different spatial and temporal scales and for incorporating these effects on Earth System Models ESMS

Dryland Ecohydrology Paolo D'Odorico, Amilcare Porporato, 2006-01-09 Ecohydrology emerges as a new field of research aiming at furthering our understanding of the earth system through the study of the interactions between the water cycle and vegetation By combining the analysis of biotic and abiotic components of terrestrial ecosystems this volume provides a synthesis of material on arid and semiarid landscapes which is currently spread in a number of books and journal articles The focus on water limited ecosystems is motivated by their high sensitivity to daily seasonal and decadal perturbations in water availability and by the ecologic climatic and economic significance of most of the drylands around the world Conceived as a tool for scientists working in the area of the earth and environmental sciences this book presents the basic principles of eco hydrology as well as a broad spectrum of topics and advances in this research field The chapters collected in this book have been contributed by authors with different expertise who work in

several arid areas around the World They describe the various interactions among the biological and physical dynamics in dryland ecosystems starting from basic processes in the soil vegetation climate system to landscape scale hydrologic and geomorphic processes ecohydrologic controls on soil nutrient dynamics and multiscale analyses of disturbances and patterns

Production and Improvement of Crops for Drylands U. S. Gupta,1995 The importance of dryland farming has been highlighted in the earlier edited titled *Physiological Aspects of Dryland Farming* which has been in the market for two decades 1975 1995 Since then considerable research has been conducted and the results published It was thought necessary to incorporate the new data Some of the contributors have updated their chapters The editor took on the task of updating the remaining chapters and these have come out very well The chapter Heat until concept of crop maturity has been deleted and a new chapter Crop improvement for arid environment has been added This is an advance which was lacking in the previous work and has thus increased the value of book tremendously It was considered appropriate to change the title of the work to the present one The book is international in scope and has thus maintained its character It is authoritative and well documented and will serve the readers even better than before

The Future of Drylands Cathy Lee,Thomas Schaaf,2008 Dryland ecosystems support a surprising amount of biodiversity desertification however is a significant land degradation problem in the arid semi arid and dry sub humid regions of the world The situation is likely to worsen with high population growth rates and accompanying land use conflicts The contributions to this publication an international scientific conference held under the leadership of UNESCO address these issues and offer practical solutions for combating desertification along with conserving and sustainably managing dryland ecosystems This volume documents how improved understanding of drylands provides insight into the health and future prospects of these ecosystems that should help ensure that dryland communities enjoy a sustainable future Publisher s description

The End of Chidyerano Elias Mandala,2005-10-30 In this groundbreaking work Mandala argues that there is more to food studies than the analysis of famine that hunger exists only as an integral part of abundance Basing his case on the history of southern Malawi he identifies several factors that explain why although notorious for its annual food deficits the region is not a land of frequent famine By proving that seasonal hunger does not lead to famine in the absence of political crisis and showing in detail how rare events get their meaning from the everyday Mandela underscores the need to understand the daily and seasonal routines of food cultivation and eating in their own right
