Dry Etching for Microelectronics R.A. Powell, 2012-12-02 This volume collects together for the first time a series of in depth critical reviews of important topics in dry etching such as dry processing of III V compound semiconductors dry etching of refractory metal silicides and dry etching aluminium and aluminium alloys This topical format provides the reader with more specialised information and references than found in a general review article In addition it presents a broad perspective which would otherwise have to be gained by reading a large number of individual research papers An additional important and unique feature of this book is the inclusion of an extensive literature review of dry processing compiled by search of computerized data bases A subject index allows ready access to the key points raised in each of the chapters

Dry Etching Technology for Semiconductors Kazuo Nojiri, 2014-10-25 This book is a must have reference to dry etching technology for semiconductors which will enable engineers to develop new etching processes for further miniaturization and integration of semiconductor integrated circuits The author describes the device manufacturing flow and explains in which part of the flow dry etching is actually used The content is designed as a practical guide for engineers working at chip makers equipment suppliers and materials suppliers and university students studying plasma focusing on the topics they need most such as detailed etching processes for each material Si SiO<sub>2</sub> Metal etc used in semiconductor devices etching equipment used in manufacturing fabs explanation of why a particular plasma source and gas chemistry are used for the etching of each material and how to develop etching processes The latest key technologies are also described such as 3D IC Etching Dual Damascene Etching Low k Etching Hi k Metal Gate Etching FinFET Etching Double Patterning etc

Dry Etching for VLSI A.J. van Roosmalen, J.A.G. Baggerman, S.J.H. Brader, 1991-03-31 This book has been written as part of a series of scientific books being published by Plenum Press The scope of the series is to review a chosen topic in each volume To supplement this information the abstracts to the most important references cited in the text are reprinted thus allowing the reader to find in depth material without having to refer to many additional publications This volume is dedicated to the field of dry plasma etching as applied in silicon semiconductor processing Although a number of books have appeared dealing with this area of physics and chemistry these all deal with parts of the field This book is unique in that it gives a compact yet complete in depth overview of fundamentals systems processes tools and applications of etching with gas plasmas for VLSI Examples are given throughout the fundamental sections in order to give the reader a better insight in the meaning and magnitude of the many parameters relevant to dry etching Electrical engineering concepts are emphasized to explain the pros and cons of reactor concepts and excitation frequency ranges In the description of practical applications extensive use is made of cross referencing between processes and materials as well as theory and practice It is thus intended to provide a total model for understanding dry etching The book has been written such that no previous knowledge of the subject is required It is intended as a review of all aspects of dry etching for silicon semiconductor processing

**Micro-Optical Alignment Methods** Robert A. Boudreau, Sharon M. Boudreau, 2018-10-03 The most expensive phase in the manufacture of micro optical components and fiber optics is also one of the most performance critical optical alignment of the components The increasing degree of miniaturization makes this an especially challenging task Active alignment methods result in higher costs and awkward processes and for some applications they simply are not possible Passive Micro Optical Alignment Methods introduces the passive alignment methods that are currently available and illustrates them with many examples references and critiques The first book dedicated to passive alignment it begins with an overview of the current activities requirements and general results of passive optical alignments followed by three sections of in depth analysis The first of these discusses mechanical passive alignment highlighting silicon waferboard solder and Jitney technologies as well as application of mechanical alignment to 3D free space interconnects The next section describes the various visual alignment techniques applied to Planar Lightwave Circuits PLCs and low cost plastic and surface mount packaging The final section details various utilities that aid passive alignment and their resulting tradeoffs and demonstrates Monte Carlo analysis to evaluate the potential of a given method Passive Micro Optical Alignment Methods provides the tools necessary to meet the challenge of precision and low cost alignment for applications that require micron or sub micron tolerance

Micro/Nanotribology and Its Applications Bharat Bhushan, 2012-12-06 Micro nanotribology as a field is concerned with experimental and theoretical investigations of processes ranging from atomic and molecular scales to the microscale occurring during adhesion friction wear and thin film lubrication at sliding surfaces As a field it is truly interdisciplinary but this confronts the would be entrant with the difficulty of becoming familiar with the basic theories and applications the area is not covered in any undergraduate or graduate scientific curriculum The present work commences with a history of tribology and micro nanotribology followed by discussions of instrumentation basic theories of friction wear and lubrication on nano to microscales and their industrial applications A variety of research instruments are covered including a variety of scanning probe microscopes and surface force apparatus Experimental research and modelling are expertly dealt with the emphasis throughout being applied aspects      Nano- and Micro-Electromechanical Systems Sergey Edward Lyshevski, 2018-10-03 Society is approaching and advancing nano and microtechnology from various angles of science and engineering The need for further fundamental applied and experimental research is matched by the demand for quality references that capture the multidisciplinary and multifaceted nature of the science Presenting cutting edge information that is applicable to many fields Nano and Micro Electromechanical Systems Fundamentals of Nano and Microengineering Second Edition builds the theoretical foundation for understanding modeling controlling simulating and designing nano and microsystems The book focuses on the fundamentals of nano and microengineering and nano and microtechnology It

emphasizes the multidisciplinary principles of NEMS and MEMS and practical applications of the basic theory in engineering practice and technology development. Significantly revised to reflect both fundamental and technological aspects, this second edition introduces the concepts, methods, techniques, and technologies needed to solve a wide variety of problems related to high performance nano and microsystems. The book is written in a textbook style and now includes homework problems, examples, and reference lists in every chapter, as well as a separate solutions manual. It is designed to satisfy the growing demands of undergraduate and graduate students, researchers, and professionals in the fields of nano and microengineering and to enable them to contribute to the nanotechnology revolution.

*Micro Dry Etching Process for Vertical Cavity Surface Emitting Lasers* A. Matsutani, F. Koyama, K. Iga, TOKYO INST OF TECH (Japan), 1992  
A microcavity surface emitting SE laser is very attractive for future optoelectronic applications such as optical parallel processing and optical interconnections. In order to realize such a low threshold SE laser, micro fabrication providing a low damage etch is one of important issues. We have introduced a reactive ion etch (RIE) and reactive ion beam etch (RIBE) technique to fabricate a tiny dielectric multilayer reflector and micro resonator for surface emitting lasers. In most of SE laser structures, a SiO<sub>2</sub>/TiO<sub>2</sub> dielectric multilayer reflector or semiconductor multilayer mirror is used as high reflective mirrors. However, it has been difficult to fabricate the microcavity with steep side walls by wet chemical etching since each material has different etching rates. Dry etch techniques for multilayer structures, especially for GaInAsP/InP semiconductors, have not been fully studied.

Low temperature plasma physics is a very active area of research located on the boundaries between physics, chemistry, and materials science. Recent technological developments, e.g. in plasma etching or plasma deposition, have led to a revived interest in plasma physics and technology. This volume describes in detail fundamentals and applications of low temperature plasma physics, including newest achievements. The authors of this volume are top scientists from the USA and Europe who present most recent successes in our understanding of how plasmas behave and put a strong focus on the links between theory and experiment or technological process.
