## **Beavers Lodge:**

**The Beaver's Lodge** Adam Reingold,2009-08-01 Explore the remarkable homes built by animal architects Beavers create complex structures to meet their needs just like people do Each beaver family builds a dam in a river or creek in order to make a pond The furry engineers then build a lodge out of branches logs and mud in the middle of the pond They stay safe and warm in a large room above the water in their lodge Jaw dropping photos a habitat map and fascinating information will captivate young readers as they learn about these truly spectacular animal towns **Look Inside a Beaver's Lodge** Megan Cooley Peterson,2012 Full color photographs and simple text describe beaver lodges Provided by publisher *Beavers and Their Homes* Deborah Chase Gibson,1999-01-15 Presents an overview of the physical characteristics and habits of beavers and how and where they make their homes **Beavers** Frank Rosell,Róisín Campbell-Palmer,2022-01-07 Beavers are represented by two extant species the Eurasian beaver *Castor fiber* and the North American beaver *Castor canadensis* each has played a significant role in human history and dominated wetland ecology in the northern hemisphere Their behaviour and ecology both fascinate and perhaps even infuriate but seemingly never fail to amaze Both species have followed similar histories from relentless persecution to the verge of extinction largely through hunting followed by their subsequent recovery and active restoration which is viewed by many as a major conservation success story Beavers have now been reintroduced throughout Europe and North America demonstrating that their role as a keystone engineer is now widely recognised with proven abilities to increase the complexity and biodiversity of freshwater ecosystems What animals other than humans can simultaneously act as engineers forest workers carpenters masons creators of habitats and nature managers Over the last 20 years there has been a huge increase in the number of scientific papers published on these remarkable creatures and an authoritative synthesis is now timely This accessible text goes beyond their natural history to describe the impacts on humans conflict mitigation animal husbandry management and conservation *Beavers Ecology Behaviour Conservation and Management* is an accessible reference for a broad audience of professional academics especially carnivore and mammalian biologists researchers and graduate students governmental and non governmental wildlife bodies and amateur natural historians intrigued by these wild animals and the extraordinary processes of nature they exemplify *The Beaver* Dietland Müller-Schwarze,Lixing Sun,2003 Beavers can and do dramatically change the landscape The beaver is a keystone species their skills as foresters and engineers create and maintain ponds and wetlands that increase biodiversity purify water and prevent large scale flooding Biologists have long studied their daily and seasonal routines family structures and dispersal patterns As human development encroaches into formerly wild areas property owners and government authorities need new nonlethal strategies for dealing with so called nuisance beavers At the same time the complex behavior of beavers intrigues visitors at parks and other wildlife viewing sites because it is relatively easy to observe In an up to date exhaustively illustrated and comprehensive book on beaver biology and management Dietland Muller Schwarze and Lixing Sun gather a

wealth of scientific knowledge about both the North American and Eurasian beaver species The Beaver is designed to satisfy the curiosity and answer the questions of anyone with an interest in these animals from students who enjoy watching beaver ponds at nature centers to homeowners who hope to protect their landscaping Photographs taken by the authors document every aspect of beaver behavior and biology the variety of their constructions and the habitats that depend on their presence Beaver facts Just as individual beavers shape their immediate surroundings so did the distribution of beavers across North America influence the paths of English and French explorers and traders As a result of the fur trade beavers were wiped out across large areas of the United States Reintroduction efforts led to the widespread establishment of these resilient animals and now they are found throughout North America Europe and parts of the southern hemisphere Beaver meadows provided early settlers with level fertile pastures and hayfields Based on the fossil record the smallest extinct beaver species were the size of a muskrat and the largest may have reached the size of a black bear five to six times as large as today s North American beavers Beaver gnawed wood has been found alongside the skeleton of a mastodon Some beavers remain in the home lodge for an extra year to assist their parents in raising younger siblings They feed groom and guard the newborn kits In 1600 beaver ponds covered eleven percent of the upper Mississippi and Missouri Rivers watershed above Thebes Illinois Restoring only 3 percent of the original wetlands might suffice to prevent catastrophic floods such as those in the early 1990s
