

The background of the book cover features a warm, golden-brown gradient. At the top, there are several dark red silhouettes of early hominids in various poses, some appearing to be in motion or interacting. To the right, there are silhouettes of animals, including what looks like a large primate or early hominid and a smaller animal. The overall aesthetic is that of a prehistoric or evolutionary theme.

## **Becoming Human Evolution And Human Uniqueness:**

*Becoming Human* Ian Tattersall, 1999 Explores the evolution of humankind who we are where we came from and where we are going

**Becoming Human** Ian Tattersall, 1998-01-01 One of the traits that distinguishes us from our nearest ancestors is our curiosity about the origins of our species In his new book Ian Tattersall author of *The Fossil Trail* discusses human uniqueness investigating the origins of those characteristics and processes that so distinguish human beings such as creativity language and consciousness Taking the reader around the world stopping in France to examine 30 000 year old cave paintings in Africa to see where our earliest ancestors left their bones and in remote forests to spy on our closest relatives the great apes Tattersall uncovers what it is that makes us really different and what the future might hold for our species Early reviews of *Becoming Human* The best book on human evolution I've ever read Nile Eldredge Curator Department of Invertebrates the American Museum of Natural History Tattersall's most recent contribution is the most concise most readable and most thoughtful treatment available on the subject of human evolution This is a must read for everyone intrigued by their origins and place in nature Donald Johanson Professor of Anthropology Arizona State University Tattersall engages the reader in a fascinating contemplation of just how we differ from all other organisms Jeffrey Schwartz author of *The Red Ape and What the Bones Tell Us*

**Becoming Human** Michael Tomasello, 2019 Virtually all theories of how humans have become such a distinctive species focus on evolution Here Michael Tomasello proposes a complementary theory of human uniqueness focused on ontogenetic processes His data driven model explains how those things that make us most human are constructed during the first years of a child's life Tomasello assembles nearly three decades of experimental work with chimpanzees bonobos and human children to propose a new framework for psychological development between birth and seven years of age He identifies eight pathways that starkly differentiate humans from their closest primate relatives social cognition communication cultural learning cooperative thinking collaboration prosociality social norms and moral identity In each of these great apes possess rudimentary abilities But then Tomasello argues the maturation of humans evolved capacities for shared intentionality transform these abilities into uniquely human cognition and sociality The first step occurs around nine months with the emergence of joint intentionality exercised mostly with caregiving adults The second step occurs around three years with the emergence of collective intentionality involving both authoritative adults who convey cultural knowledge and coequal peers who elicit collaboration and communication Finally by age six or seven children become responsible for self regulating their beliefs and actions so that they comport with cultural norms Built on the essential ideas of Lev Vygotsky *Becoming Human* places human sociocultural activity within the framework of modern evolutionary theory and shows how biology creates the conditions under which culture does its work

[The Mirage of Dignity on the Highways of Human 'Progress'](#) Lukman Harees, 2012-01-16 The Modern Man is hypocritically boasting of unprecedented material progress in a world where inter alia millions daily go to bed hungry die or get killed through

unwanted wars and preventable causes live in inhumane conditions vulnerable being exploited with ever widening inequality and might still ruling over right in international relations even in the post UDHR era an indictment on the collective conscience of mankind Besides the flame of materialism has been devouring time tested moral values causing chaos within the basic unit in society the family and relegating Man and his dignity to the level of animals and even manipulating his identity Therefore questions arise Is Moral law fading are political economic systems and institutions like UN failing in realizing the lofty goal of affording due dignity basic rights and social justice humanity deserves Can the bystanders be mere onlookers anymore This book seeks to dispassionately survey the yawning gap between the rhetoric and the ground reality in bringing about dignity and social justice for humanity from bystanders perspective in the light of these questions and underlines the imperative need for moral progress to go hand in hand to make Man assume his due role as the trustee on earth It also exhorts bystanders to close ranks as human dignity champions rights defenders identity protectors against onslaughts from power hungry politicians mighty powers and vested interests This is the need of the times and what our future progeny demands

Being Human Richard Gross,2013-01-11 Richard Gross turns his expert eye to the psychology of human nature in a contemplative account encompassing cognition consciousness language time perception sense of mortality and human society This book will help you to consider the unique aspects of being human and to understand the biological underpinnings for the intriguing and distinct behaviours and experiences common to human beings The book is enhanced throughout by its logical arrangement of topics with key questions issues for additional focus and reflection points highlighted throughout useful chapter introductions and summaries to provide clarity and insight diagrams to help explain difficult concepts detailed selection of references and useful sources including works from the fields of psychology philosophy religion and literature This book is essential reading for students of psychology and related disciplines as well as general readers seeking insights into one of the most enduring questions to have faced humankind throughout history

**Game Over?** Christophe Chalamet,Andreas Dettwiler,Marcel Mazzocco,Ghislain Waterlot,2017-09-11 Modern science informs us about the end of the universe game over is the message which lies ahead of our world Christian theology on the other hand sees in the end not the cessation of all life but rather an invitation to play again in God s presence Is there a way to articulate together such vastly different claims Eschatology is a theological topic which merits being considered from several different angles This book seeks to do this by gathering contributions from esteemed and fresh voices from the fields of biblical exegesis history systematic theology philosophy and ethics How can we make sense today of Jesus and the New Testament s eschatological message How did he his early disciples and the Christian tradition envision the end of the world Is there a way for us to articulate together what modern science tells us about the end of the universe with the biblical and Christian claims about God who judges and who will wipe every tear Eschatology has been at the heart of Christian theology for 100 years in the West What should we do with this legacy Are there ways to move our reflection forward in our century Scholars and

other interested readers will find here a wealth of insights

[The Human Evolution Source Book](#) Russell L. Ciochon, John G. Fleagle, 2006 Designed for readers interested in anthropology paleontology and evolutionary biology this excellent resource brings together the major ideas and publications on human evolution of the past three decades Filled with original articles that have shaped current views of this exciting field the book spans the entire scope of human evolution with a particular emphasis on the fossil record including archaeological studies The most up to date survey of human evolution available on the market today the articles presented are organized chronologically showing how debates and opinions have developed over time The book is divided into the following sections geological background to human evolution the earliest hominins biomolecular and morphological evidence Australopithecus Paranthropus and related forms origin of the genus Homo evolution and dispersal of Homo erectus middle Pleistocene hominins in Africa Europe and Asia the Neandertals origin of modern humans and evolution of Homo sapiens An excellent desk reference and resource for anthropologists paleontologists and evolutionary biologists as well as others who wish to add this most informative book to their own libraries

**Annual Report** American Museum of Natural History, 1998

[Handbook of Human Molecular Evolution, 2 Volume Set](#) David N. Cooper, Hildegard Kehrer-Sawatzki, 2008-10-13 This splendid compendium will be the standard reference work for years to come a handbook to browse to consult to look things up in and to read with pleasure wonder and post Darwinian exhilaration Richard Dawkins This is a marvellous book It should

be in every university library preferably in several copies and every reader of this journal should add it to their next grant application It really is that good I have already found this book to be invaluable For many years to come these two volumes will be the starting point for anyone wishing to find out about virtually any subject relating to human genetics Any scientist working on humans or other animals will find many things in these pages that will stimulate inform and inspire The authors editors and publishers are to be congratulated for their work order a copy now HUMAN GENETICS The publishers and editors deserve to be congratulated for publishing this major book which coincides with the 200th anniversary of the birth of Charles Darwin The book is well timed with biologists theologians and sociologists engaged in intense debate on the Darwinian Theory on the origin of species evolution and natural selection There is little doubt that this marvellous publication should be in the library of universities and academic institutions dealing with basic and applied biology research and education It will not be surprising if the individual academic or researcher decides to invest in this resource and enrich their personal collection of leading books in genetics and genomics GENOMIC MEDICINE A Unique Collection of High Quality Articles Derived from the Acclaimed Encyclopedia of Life Sciences The revolution in human molecular genetics which has taken place over the last three decades has yielded a wealth of information not only on the structure and function of our genes but also on gene expression mutation and polymorphic variation Over the last five years the focus has moved from genes to genomes Even though the annotation of our 30 000 genes is still in progress genome wide studies have already yielded abundant evidence for the signatures of past selection and adaptive evolution within human gene sequences Further the completion of the sequencing of the 3 billion base pair human genome coupled with the increasing availability of other vertebrate genome sequences has ushered in a new era of comparative genomics We are now able to identify many of the molecular events from the chromosomal level down to the single base pair that have occurred during vertebrate mammalian primate and hominid evolution Indeed the detailed comparison of the human and chimpanzee genomes has begun to reveal some of the genetic changes that have been involved in the development of human lineage specific traits We are thus acquiring the ability to ask searching questions about our origins about the demographic processes associated with the global radiation of humankind as well as some of the unique adaptations that make us human Evolutionary biology has become so broad that its impact may be felt across the spectrum of the biological sciences The aim of the Handbook of Human Molecular Evolution is relatively straightforward to bring together under the same cover the many and varied strands of our knowledge of human primate vertebrate molecular evolution Hence the 282 chapters that comprise this essential reference work have been thematically arranged into twelve sections covering the whole scope of research into human molecular evolution General Concepts in Evolutionary Genetics Mutation Adaptation and Natural Selection Evolutionary and Population Genetics Human Evolution Human Genome Evolution Evolution of Human Gene Structure and Function Evolution of Gene Expression Mitochondrial Genome Evolution Chromosomal Evolution Comparative Genomics Evolution and Disease

Susceptibility Analysis of Ancient DNA This conceptual outline informed the selection of the chapters themselves and the connections between them Some of these chapters are intended to be introductory aimed at undergraduates and non specialists They provide basic information and a list of recommended further reading to encourage the reader to explore a topic in more depth This approach helps the student reader progress from textbook material to primary literature Some chapters are overviews that address topics of broad interest and importance while others focus on quite specialized topics These chapters are written for postgraduate students and research workers they contain more detailed information and key references allowing the reader to investigate a specific area in more depth This format allows professionals to use the books as a quick reference source The chapters are richly supplied with website information to allow access to relevant data sources over the internet The self contained peer reviewed articles in this unique handbook have been written by leading scientists in each field Key topics include the evolution of enzyme function the use of nucleic acid divergence as a molecular clock the origin of non functional or junk DNA the role of gene duplication in the emergence of novel gene function and the identification of molecular changes responsible for various human characteristics especially those pertaining to infection cognition disease and disease susceptibility The Handbook of Human Molecular Evolution has adopted an integrated approach to the study of human evolution and seeks throughout to emphasize the interplay between molecular genetic concepts and principles on the one hand and information acquisition and interpretation on the other In this way it is hoped that the documents of evolutionary history written into the fabric of our genome will become accessible to the widest possible audience
