Şehvar Beşiroğlu (Danışman.), Türk Musiki Devlet Konservatuarı, 2009 This dissertation is a research on the application of standardized contemporary instrumental techniques to certain Turkish music instruments kemeçe ud kanun tney in addition to the proposition of the notation of particular techniques that are unique to those instruments The main purpose of this study is to contribute to the formation of the common terminology that will enrich the communication between contemporary music composers and traditional Turkish music composers and performers This communication will strengthen composers relation with the tradition in order to create access to unique artistic formations in order to establish

this communication possibilities and characteristics of these four instruments are analyzed according to the results of this research new notation methods are proposed Me k a system that does not use any written material to transmit the musical works remained as the only method in the tradition of Turkish Music education Western notation has been adapted to Turkish Music only at the beginning of the twentieth century but especially by the establishment of the State Conservatory in 1976 Since the tradition focuses on the revelation of the single melodic line the idiomatic principles of Turkish music instruments are not systemized even by the conservatory Therefore this thesis is not a research on the characteristics of the tradition rather is a research based on a p tice study Observations and experiences that are accomplished as a result of this process are emolled in this dissertation as a proposition of a prototype of the idiomatic studies on Turkish music instruments in the appendix section there are musical pieces that present exemplifications of the inferences of this research These pieces are presented under the collective title hat that contains every possible combination of these four instruments in an ensemble setting four solos six duos four trios and two quartets
