Content-Addressable Memories Teuvo Kohonen,2012-12-06 Due to continual progress in the large scale integration of semiconductor circuits parallel computing principles can already be met in low cost systems numerous examples exist in image processing for which special hardware is implementable with quite modest resources even by nonprofessional designers Principles of content addressing if thoroughly understood can thereby be applied effectively using standard components On the other hand mass storage based on associative principles still exists only in the long term plans of computer technologists This situation is somewhat confused by the fact that certain expectations are held for the development of new storage media such as optical memories and spin glasses metal alloys with low density magnetic impurities Their technologies however may not ripen until after fifth generation computers have been built It seems that software methods for content addressing especially those based on hash coding principles are still holding their position firmly and a few innovations have been developed recently As they need no special hardware one might expect that they will spread to a wide circle of users This monograph is based on an extensive literature survey most of which was published in the First Edition I have added Chap which contains a review of more recent work This updated book now has references to over 1200 original publications In the editing of the new material I received valuable help from Anneli Heimburger M Sc and Mrs Leila Koivisto

Content-Addressable Memories T. Kohonen,2012-12-06 Designers and users of computer systems have long been aware of the fact that inclusion of some kind of content addressable or associative functions in the storage and retrieval mechanisms would allow a more effective and straightforward organization of data than with the usual addressed memories with the result that the computing power would be significantly increased However although the basic principles of content addressing have been known for over twenty years the hardware content addressable memories CAMs have found their way only to special roles such as small buffer memories and control units This situation now seems to be changing Because of the development of new technologies such as very large scale integration of semiconductor circuits charge coupled devices magnetic bubble memories and certain devices based on quantum mechanical effects an increasing amount of active searching functions can be transferred to memory units The prices of the more complex memory components which earlier were too high to allow the application of these principles to mass memories will be reduced to a fraction of the total system costs and this will certainly have a significant impact on the new computer architectures In order to advance the new memory principles and technologies more information ought to be made accessible to a common user

Construction and Evaluation of Content Addressable Memories Caxton C. Foster,MASSACHUSETTS UNIV AMHERST.,1982 The work on this grant has fallen into four distinct phases First of all we constructed a small 320 word Content Addressable Memory CAM from commercially available components Second we selected a number of problems intended to span the spectrum of CAM applications and programmed these on our small machine Third we analyzed the

strengths and weaknesses of our small machine as displayed in the solution of these problems Finally we designed but have not yet constructed a full scale CAM that retained the strengths of our small machine and incorporated features intended to overcome its weaknesses In parallel with the above work in an attempt to aid in the selection of representative problems for study we have spent a considerable amount of effort investigating the theoretical capabilities of CAMs Author **Proximity Content-addressable Memory** James Donald Roberts,1990 *A Content Addressable Memory Chip for LZW Compression and Decompression with Tags* Omer Bar-Lev,1996 **Official Gazette of the United States Patent and Trademark Office** ,1990 **Content Addressable Parallel Processors** Caxton C. Foster,1976 Content addressable memories or content addressable parallel processors or associative memories or associative processors have been around the computing scene for almost 20 years now Several hundred papers have been written discussing their use and design but so far no single text or reference book has tried to summarize the field This volume attempts to remedy this lack It attempts to gather into one place all the information that exists as of late 1975 *Self-Organization and Associative Memory* Teuvo Kohonen,2012-12-06 While the present edition is bibliographically the third one of Vol 8 of the Springer Series in Information Sciences IS 8 the book actually stems from Vol 17 of the series Communication and Cybernetics CC 17 entitled Associative Memory A System Theoretical Approach which appeared in 1977 That book was the first monograph on distributed associative memories or content addressable memories as they are frequently called especially in neural networks research This author however would like to reserve the term content addressable memory for certain more traditional constructs the memory locations of which are selected by parallel search Such devices are discussed in Vol 1 of the Springer Series in Information Sciences Content Addressable Memories This third edition of IS 8 is rather similar to the second one Two new discussions have been added one to the end of Chap 5 and the other the L VQ 2 algorithm to the end of Chap 7 Moreover the convergence proof in Sect 5 7 2 has been revised *Content-addressable Memory* Teuvo Kohonen,1987 **NeuralSource** Philip D.
