

Plate tectonics

Plate motion over time

- Satellites are used to measure plate motion precisely.
 - Plates move very slowly – 1-12 cm per year
 - North American and Eurasian plate move about 2.5 cm/year
 - This is about the same speed in which your fingernails grow
 - Although very slow the plates have been moving for hundreds of millions of years, they have moved great distances.

Plate Motion

Since the breakup of Pangaea, the continents have taken about 200 million years to move

200 Million Years Ago

115 Million Years ago

Earth Today

- As the plates move, they create earthquakes, volcanoes, mountain ranges and deep ocean trenches

Beyond Plate Tectonics James Maxlow,2018 Science is never settled New revolutionary ideas have always overturned the settled sciences of the past In this far reaching book the author looks beyond plate tectonics in order to detail the next earth science revolution Drawing upon his work from four decades as a professional geologist and researcher the author reveals the weaknesses of conventional plate tectonic theory This research utilizes an extensive range of global observational data in order to reverse engineer geology back in time Reverse engineering seafloor and crustal geology enables past plate assemblages and configurations of the ancient continents to be accurately constrained using geology rather than geophysics From this a series of spherical geological models of the Earth are presented showing the precise locations and configurations of the ancient continents ranging back in time to the early Archaean These plate assemblages represent the first time that models of the ancient Earth have been geologically constrained back to the early Archaean An extensive range of additional global observational data are then displayed on the spherical models in order to quantify the location of the ancient poles and equator climate zones biogenic distributions exposed lands and seas as well as global distributions of hydrocarbon and metallic resources The research outcomes presented in this book are applicable to all disciplines of the Earth sciences and will appeal to a broad range of professional expertise in particular those with a grounding in the Earth sciences It is a must read for undergraduates and professionals alike

Lunine,1999 This is an outstanding overview of the history of the Earth from a unique planetary perspective for introductory courses in the earth sciences The book approaches Earth history as an evolution encompassing the origin of the cosmos through the inner working of living cells Earth Evolution of a Habitable Planet tells how the Earth has come to its present state why it differs from its neighboring planets what life s place is in Earth s history and how humanity affects the processes that make our planet livable Today s human influences are contemplated in the context of natural changes on Earth This book brings a fresh perspective to the study of the Earth for students who wish to learn how our planet evolved to its present form

Adopting the Beat of Expression: An Emotional Symphony within **Continents In Motion**

In some sort of used by displays and the ceaseless chatter of instantaneous transmission, the melodic splendor and psychological symphony created by the published term often fade into the back ground, eclipsed by the persistent noise and disturbances that permeate our lives. Nevertheless, set within the pages of **Continents In Motion** a marvelous fictional value overflowing with fresh thoughts, lies an immersive symphony waiting to be embraced. Constructed by a wonderful musician of language, that interesting masterpiece conducts visitors on an emotional trip, well unraveling the concealed tunes and profound influence resonating within each cautiously crafted phrase. Within the depths with this emotional assessment, we shall explore the book is main harmonies, analyze its enthralling writing style, and surrender ourselves to the profound resonance that echoes in the depths of readers souls.
