Continua With The Houston Problem:

Open Problems in Topology II Elliott M. Pearl, 2011-08-11 This volume is a collection of surveys of research problems in topology and its applications The topics covered include general topology set theoretic topology continuum theory topological algebra dynamical systems computational topology and functional analysis New surveys of research problems in topology New perspectives on classic problems Representative surveys of research groups from all around the world

Recent Progress in General Topology III K.P. Hart, J. van Mill, P. Simon, 2013-12-11 The book presents surveys describing recent developments in most of the primary subfields of General Topology and its applications to Algebra and Analysis during the last decade following the previous editions North Holland 1992 and 2002 The book was prepared in connection with the Prague Topological Symposium held in 2011 During the last 10 years the focus in General Topology changed and therefore the selection of topics differs from that chosen in 2002 The following areas experienced significant developments Fractals Coarse Geometry Topology Dimension Theory Set Theoretic Topology and Dynamical Systems

Set Function T Sergio Macías, 2021-03-19 This book presents in a clear and structured way the set function T and how it evolved since its inception by Professor F Burton Jones in the 1940s It starts with a very solid introductory chapter with all the prerequisite material for navigating through the rest of the book It then gradually advances towards the main properties Decomposition theorems T closed sets continuity and images to modern applications The set function T has been used by many mathematicians as a tool to prove results about the semigroup structure of the continua and about the existence of a metric continuum that cannot be mapped onto its cone or to characterize spheres Nowadays it has been used by topologists worldwide to investigate open problems in continuum theory This book can be of interest to both advanced undergraduate and graduate students and to experienced researchers as well Its well defined structure make this book suitable not only for self study but also as support material to seminars on the subject Its many open problems can potentially encourage mathematicians to contribute with further advancements in the field

Publications de L'Institut Mathématique, 1998 *Boletín de la Sociedad Matemática Mexicana* Sociedad Matemática Mexicana, 2005 Continuum Theory and Dynamical Systems Morton Brown, American Mathematical Society, National Science Foundation (U.S.), 1991 This volume contains the proceedings of the AMS IMS SIAM Joint Summer Research Conference on Relationships between Continuum Theory and the Theory of Dynamical Systems held at Humboldt State University in Arcata California in June 1989 The conference reflected recent interactions between dynamical systems and continuum theory Illustrating the increasing confluence of these two areas this volume contains introductory papers accessible to mathematicians and graduate students in any area of mathematics as well as papers aimed more at specialists Most of the papers are concerned with the dynamics of surface homeomorphisms or of continua that occur as attractors for surface homeomorphisms *Publications de l'Institut mathématique* Matematički institut (Belgrade, Serbia), 1998

Open Problems in Topology J. van Mill, George M.

Reed,1990 From the Introduction This volume grew from a discussion by the editors on the difficulty of finding good thesis problems for graduate students in topology Although at any given time we each had our own favorite problems we acknowledged the need to offer students a wider selection from which to choose a topic peculiar to their interests One of us remarked Wouldn t it be nice to have a book of current unsolved problems always available to pull down from the shelf The other replied Why don t we simply produce such a book Two years later and not so simply here is the resulting volume The intent is to provide not only a source book for thesis level problems but also a challenge to the best researchers in the field

CMUC ,2012 Questions and Answers in General Topology ,2004 **Glasnik Matematički** ,2007 **Fundamenta Mathematicae** ,2010 **Fixed Point Theory and Its Applications** Jacek Jachymski,Simeon Reich,2007 Houston Journal of Mathematics ,1982 **Acta Universitatis Carolinae** ,1999 **Continuous Mappings on Continua** T. Maćkowiak,1979 **Hokkaido Mathematical Journal** ,2007 Soochow Journal of Mathematics ,1992 Inverse Spectra

Alex Chigogidze,1996-03-29 This is a comprehensive introduction into the method of inverse spectra a powerful method successfully employed in various branches of topology The notion of an inverse sequence and its limits first appeared in the well known memoir by Alexandrov where a special case of inverse spectra the so called projective spectra were considered The concept of an inverse spectrum in its present form was first introduced by Lefschetz Meanwhile Freudental had introduced the notion of a morphism of inverse spectra The foundations of the entire method of inverse spectra were laid down in these basic works Subsequently inverse spectra began to be widely studied and applied not only in the various major branches of topology but also in functional analysis and algebra This is not surprising considering the categorical nature of inverse spectra and the extraordinary power of the related techniques Updated surveys including proofs of several statements of the Hilbert cube and Hilbert space manifold theories are included in the book Recent developments of the Menger and N beling manifold theories are also presented This work significantly extends and updates the author s previously published book and has been completely rewritten in order to incorporate new developments in the field

Notable Mathematicians Robyn V. Young,Zoran Minderović,1998 In addition to profiling 300 mathematicians from ancient times to the present day this volume includes women and minorities provides a timeline of mathematics lists winners of mathematical awards and prizes and indexes its subjects by sex nationality and topic
