Control Dynamic Systems Theory Volume 18:

System Theory -- A Modern Approach, Volume 1 Henri Bourlès, 2024-07-03 The theory of dynamic systems is addressed in this book in accordance with the modern approach heir to algebraic analysis which has been implemented since the last decade of the 20th century After a reminder of the evolution of the representation of systems based on transfer functions or matrices the duality of controllability and observability is revisited and new results are produced concerning time varying discrete time systems To complete and improve the existing analyses the poles and zeros of linear systems and their interconnections are presented in a new way as well as the problem of systems governed by functional differential equations of retarded or neutral type and their stabilization This book also proposes known and original mathematical complements

A Dynamical Systems Theory of Thermodynamics Wassim M. Haddad, 2019-06-04 A brand new conceptual look at dynamical thermodynamics This book merges the two universalisms of thermodynamics and dynamical systems theory in a single compendium with the latter providing an ideal language for the former to develop a new and unique framework for dynamical thermodynamics In particular the book uses system theoretic ideas to bring coherence clarity and precision to an important and poorly understood classical area of science The dynamical systems formalism captures all of the key aspects of thermodynamics including its fundamental laws while providing a mathematically rigorous formulation for thermodynamical systems out of equilibrium by unifying the theory of mechanics with that of classical thermodynamics This book includes topics on nonequilibrium irreversible thermodynamics Boltzmann thermodynamics mass action kinetics and chemical reactions finite time thermodynamics thermodynamic critical phenomena with continuous and discontinuous phase transitions information theory continuum and stochastic thermodynamics and relativistic thermodynamics A Dynamical Systems Theory of Thermodynamics develops a postmodern theory of thermodynamics as part of mathematical dynamical systems theory The book establishes a clear nexus between thermodynamic irreversibility the second law of thermodynamics and the arrow of time to further unify discreteness and continuity indeterminism and determinism and quantum mechanics and general relativity in the pursuit of understanding the most fundamental property of the universe the entropic arrow of time
