Romero, Javier Pérez-Jara, Lino Camprubí, 2022-06-01 This book provides an up to date revision of materialism's central tenets its main varieties and the place of materialistic philosophy vis a vis scientific knowledge Materialism has been the subject of extensive and rich controversies since Robert Boyle introduced the term for the first time in the 17th century But what is materialism and what can it offer today The term is usually defined as the worldview according to which everything real is material Nevertheless there is no philosophical consensus about whether the meaning of matter can be enlarged beyond the physical As a consequence materialism is often defined in stark exclusive and reductionist terms whatever exists is either physical or ontologically reducible to it This conception if consistent mutilates reality excluding the ontological significance of political economic sociocultural anthropological and psychological realities Starting from a new history of materialism the present book focuses on the central ontological and epistemological debates aroused by today's leading materialist approaches including some little known to an anglophone readership The key concepts of matter system emergence space and time life mind and software are checked over and updated Controversial issues such as the nature of mathematics and the place of reductionism are also discussed from different materialist approaches As a result materialism emerges as a powerful indispensable scientifically supported worldview with a surprising wealth of nuances and possibilities Matter and Sense Howard Robinson, 1982-09-09 Robinson presents a very forceful critique of the modern forms that materialism has taken

Beyond Nature and Nurture Javier Pérez-Jara,Íñigo Ongay,2025-05-28 This book gathers several of the world s leading scholars in the nature vs nurture debate offering a timely reconsideration of the dynamic interactions between physical chemical biological social and cultural factors that shape human multidimensionality Emphasizing this multidimensionality this edited volume seeks to bridge the divide between biology and social theory two research communities that have too often overlooked each other These disciplines despite being central to understanding human nature have long operated in isolation While some animal species exhibit higher degrees of phenotypic plasticity in specific traits humans stand out as the most plastic species in both their neurological and sociocultural systems This plasticity leads the contributors of this book to move beyond both biological reductionism and the blank slate hypothesis While biology undoubtedly plays a role in shaping and stabilizing human social and cultural processes it does so only within the framework of an inherently social environment one shaped by historically contingent and socially constructed realities such as values codes and cultural perceptions More importantly cultural structures and social interactions actively shape and transform certain biological features that were once considered immutable This book lays the groundwork for a productive dialogue among biologists psychologists social theorists and philosophers It also highlights some of the moral and political consequences of different perspectives within the nature vs nurture debate Through updated scientific and philosophical theorizing the chapters in this book aim to overcome once and for all the simplistic yet persistent opposition between nature and nurture offering a far more complex and dynamic yet richer and epistemologically manageable picture of the human being
