Contemporary Trigonometry Howard Edward Taylor, Thomas Leonard Wade, 1973-01-01 **Modern Trigonometry** William Wooton, 1979 *Modern Trigonometry* William A. Rutledge, John A. Pond, 1961 **Lobachevsky Geometry and Modern Nonlinear Problems** Andrey Popov, 2014-08-06 This monograph presents the basic concepts of hyperbolic Lobachevsky geometry and their possible applications to modern nonlinear applied problems in mathematics and physics

summarizing the findings of roughly the last hundred years The central sections cover the classical building blocks of hyperbolic Lobachevsky geometry pseudo spherical surfaces theory net geometrical investigative techniques of nonlinear differential equations in partial derivatives and their applications to the analysis of the physical models As the sine Gordon equation appears to have profound geometrical roots and numerous applications to modern nonlinear problems it is treated as a universal object of investigation connecting many of the problems discussed The aim of this book is to form a general geometrical view on the different problems of modern mathematics physics and natural science in general in the context of non Euclidean hyperbolic geometry

The Fourth Dimension and Non-Euclidean Geometry in Modern Art, revised edition Linda Dalrymple Henderson, 2018-05-18 The long awaited new edition of a groundbreaking work on the impact of alternative concepts of space on modern art In this groundbreaking study first published in 1983 and unavailable for over a decade Linda Dalrymple Henderson demonstrates that two concepts of space beyond immediate perception the curved spaces of non Euclidean geometry and most important a higher fourth dimension of space were central to the development of modern art The possibility of a spatial fourth dimension suggested that our world might be merely a shadow or section of a higher dimensional existence That iconoclastic idea encouraged radical innovation by a variety of early twentieth century artists ranging from French Cubists Italian Futurists and Marcel Duchamp to Max Weber Kazimir Malevich and the artists of De Stijl and Surrealism In an extensive new Reintroduction Henderson surveys the impact of interest in higher dimensions of space in art and culture from the 1950s to 2000 Although largely eclipsed by relativity theory beginning in the 1920s the spatial fourth dimension experienced a resurgence during the later 1950s and 1960s In a remarkable turn of events it has returned as an important theme in contemporary culture in the wake of the emergence in the 1980s of both string theory in physics with its ten or eleven dimensional universes and computer graphics Henderson demonstrates the importance of this new conception of space for figures ranging from Buckminster Fuller Robert Smithson and the Park Place Gallery group in the 1960s to Tony Robbin and digital architect Marcos Novak
