Contract Documentation For Contractors:

Agc Contract Documents Handbook , **Contract Documentation for Contractors** Vincent Powell-Smith, John H. M. Sims, Christopher Dancaster, 2008-04-30 The JCT standard forms of building contract require a thorough understanding of their procedural requirements as well as their legal implications They require both the contractor and the architect on behalf of the employer to send a wide range of notices and letters if each party is to protect its legitimate interests The main contract forms are also supported by complex sub contract documentation Therefore it is not surprising that when this book of specimen letters notices and forms was first published it was widely welcomed by the construction industry The book provides examples of documentation likely to be required for a contract under the following JCT forms the Standard Form of Building Contract the Intermediate Form of Building Contract the Agreement for Minor Building Works the Standard Form of Building Contract With Contractor s Design It includes a commentary on the practical implications of the various documents and highlights the points to be watched The new edition takes into account the wide range of amendments to the latest editions of the standard forms following the Housing Grants Construction and Regeneration Act 1996 and in particular the new payment and adjudication provisions For the first time it features documentation for use with the JCT design and build form

documentation processes Lean approaches and network studies are used to enhance the overall performance of documentation processes in construction projects First a structured procedure for applying Lean construction principles to enhance and support document management processes through the reduction of hidden waste such as non value adding activities is proposed In this procedure value stream mapping is integrated with simulation modeling to quantitatively assess the performance of the documentation process to identify potential improvements to the current process and to quantitatively predict the impact of proposed improvements on future project performance Then social network analysis is employed to measure and analyze communication of project participants in the documentation process network Application of the execution and control portion of the framework is expected to reduce waste rework omissions and errors in turn increasing profit and value for both contractors and clients The feasibility and functionality of the proposed framework was validated using practical case studies the results of which have also provided valuable information for practitioners Altogether this research has developed a procedure that can facilitate 1 the extraction of documentation requirements 2 the forecasting of process time and cost uncertainty measurements 3 the elimination of excess production and document processing to increase transparency and reduce waste within the administrative process and 4 the discovery and quantification of documentation process networks for improved efficiency
