Preanesthetic Assessment 2 E. Frost, 1989-11-01 The primary mission of the medical school is to create new doctors Once the medical student has received his or her doctorate the medical school's interest in and acceptance of responsibility for the continued professional development of the physician ceases almost entirely Yet with scientific advances in medicine increasing exponentially and the inevitable erosion of memory with time teachings from our schools of medicine become increasingly irrelevant forgotten or both To maintain competence the physician must continuously re educate him or herself CME Continuing Medical Education will probably never attain the status of the medical school's degree granting undergraduate program but medical schools and their faculties must recognize their responsibility not only for creating competent physicians but also for maintaining that competence With these words I introduced the first volume of Preanesthetic Assessment in 1986 The series was a product of a Continuing Medical Education program initiated by the Department of Anesthesiology Albert Einstein College of Medicine Montefiore Medical Center Controversy continues to exist over the lasting educational value of conferences that bring physicians together Moreover because of time or financial constraints only a small number of anesthesiologists are able to attend seminars on a frequent basis By producing a monthly current clinical series in conjunction with Anesthesiology News over these 4 years we have been able to make state of the art analyses available to all anesthesiologists Practical Obstetric Anesthesia David M. Dewan, David D. Hood, 1997 Well illustrated hands on presentation designed for residents and practitioners Separate sections cover preoperative concerns practical physiology pharmacology establishing and maintaining anesthetic techniques management cesarean section anesthesia complicated obstetrics maternal disease non obstetric surgery post operative pain relief resuscitation critical care and medical legal considerations **Surgical Obstetrics** Warren C. Plauché, John C. Morrison, Mary Jo O'Sullivan, 1992 This beautifully illustrated reference guides the reader step by step through the complete spectrum of obstetrical surgical procedures from cesarean section and tubal ligation to cesarean hysterectomy and intrauterine fetal surgery Also covers rare obstetric surgical emergencies such as ruptured uterus inverted uterus abdominal pregnancy and other extratubal ectopic gestations The effects of surgery on pregnancy and the complications following surgery that may be due to the gestation itself are detailed making this reference a unique volume describing surgery in the field of obstetrics
