

RENIN-ANGIOTENSIN SYSTEM (RAAS)

Liver
secretes angiotensinogen

Kidney
Secretes **renin** in response to:
1. decreased arterial pressure in the kidneys
2. decreased sodium in the blood
3. increased sympathetic tone

Aliskiren (Tekturna®)
blocks renin

Renin
converts angiotensinogen to angiotensin I

Angiotensin II Receptors
located in adrenal glands, vascular smooth muscle, the heart, and the brain

Angiotensin stimulates aldosterone secretion in the adrenal glands. Aldosterone promotes sodium and fluid retention.

Angiotensin II Receptor Antagonists:

Angiotensin II Receptor Antagonists Mancia Giuseppe, 2000-07-03 Since angiotensin II is one of the most potent vasoconstrictors and an important stimulus for the secretion of aldosterone from the adrenal gland the development of angiotensin II inhibitors is an important step in regulating blood pressure This class of drug is well tolerated by patients and these drugs have the added advantage over ACE inhibitors in that they are not associated with cough Because most drugs can be given once daily and like ACE inhibitors they have a useful additive hypotensive effect in combination with diuretics they are a welcome therapeutic tool in the treatment of hypertension *Drug Discovery and Evaluation: Pharmacological Assays* Hans Vogel, 2007-10-30 The new edition of this successful reference offers both cutting edge and classic pharmacological methods Thoroughly revised and expanded to two volumes it offers an updated selection of the most frequently used assays for reliably detecting the pharmacological effects of potential drugs Every chapter has been updated and numerous assays have been added Each of the more than 1 000 assays comprises a detailed protocol outlining purpose and rationale and a critical assessment of the results and their pharmacological and clinical relevance **Meyler's Side Effects of Cardiovascular Drugs** Jeffrey K. Aronson, 2009-03-02 Elsevier now offers a series of derivative works based on the acclaimed Meyler's Side Effect of Drugs 15th Edition These individual volumes are grouped by specialty to benefit the practicing physician or health care clinician Each year heart disease kills more people than cancer Patients are treated by a variety of specialists and primary care practitioners depending on the organ system involved This volume enables practitioners to assess the adverse effects of the complete range of drugs used in cardiovascular medicine including antihypertensive drugs and drugs used in the treatment of heart failure angina angina pectoris and cardiac arrhythmia and enable practitioners to prescribe preventative treatments with medications such as blood pressure reducers aspirin and cholesterol lowering drugs as well as drugs used for more aggressive therapy The material is drawn from the 15th edition of the internationally renowned encyclopedia Meyler's Side Effects of Drugs and the latest volumes in the companion series Side Effects of Drugs Annuals Drug names have usually been designated by their recommended or proposed International Non proprietary Names rINN or pINN when those are not available clinical names have been used In some cases brand names have been used This volume is critical for any health professional involved in the administration of cardiovascular medications Surpasses the Physician's Desk Reference by including clinical case studies and independent expert analysis Complete index of drug names Most complete cross referencing of drug drug interactions available Extensive references to primary and secondary literature Also includes information on adverse effects in pregnancy The book is divided into six sections Drugs used to treat hypertension heart failure and angina pectoris Diuretics a general introduction to their adverse effects followed by monographs on individual drugs Antidysrhythmic drugs a general introduction to their adverse effects followed by monographs on individual drugs Drugs that act on the cerebral and peripheral circulations Anticoagulants
