**Angular Momentum in Geophysical Turbulence** Victor N. Nikolaevskiy, 2013-04-18 Turbulence theory is one of the most intriguing parts of fluid mechanics and many outstanding scientists have tried to apply their knowledge to the development of the theory and to offer useful recommendations for solution of some practical problems In this monograph the author attempts to integrate many specific approaches into the unified theory The basic premise is the simple idea that a small eddy that is an element of turbulent meso structure possesses its own dynamics as an object rotating with its own spin velocity and obeying the Newton dynamics of a finite body A number of such eddies fills a coordinate cell and the angular momentum balance has to be formulated for this spatial cell If the cell coincides with a finite difference element at a numerical calculation and if the external length scale is large this elementary volume can be considered as a differential one and a continuum parameterization has to be used Nontrivial angular balance is a consequence of the asymmetrical Reynolds stress action at the oriented sides of an elementary volume At first glance the averaged dyad of velocity components is symmetrical However if averaging is performed over the plane with normal  $n_j$  the principle of commutation is lost As a result the stress tensor asymmetry  $j$  is determined by other factors that participate in the angular momentum balance This is the only possibility to determine a stress in engineering *Parallel Computing Technologies* Victor Malyshekin, 2007-08-07 This book constitutes the refereed proceedings of the 9th International Conference on Parallel Computing Technologies PaCT 2007 held in conjunction with the Russian Taiwan symposium on Methods and Tools of Parallel Programming of Multicomputers It covers models and languages applications techniques for parallel programming supporting cellular automata as well as methods and tools of parallel programming of multicomputers **American Book Publishing Record**, 2004 *Doklady*, 2006 **Доклады Академии наук**, 2008 **The British National Bibliography** Arthur James Wells, 2004 **Books In Print 2004-2005** Ed Bowker Staff, Staff Bowker, Ed, 2004 **Nuclear Science Abstracts**, 1973-05 *Physics Briefs*, 1985 *Scientific and Technical Aerospace Reports*, 1973 **International Aerospace Abstracts**, 1982 **Spring Meeting** American Geophysical Union. Benzi, Giorgio Parisi, Societa Italiana de Fisica, 1985 *Magnetohydrodynamic Turbulence* Dieter Biskamp, 2003-07-31 This book presents an introduction to and modern account of magnetohydrodynamic MHD turbulence an active field both in general turbulence theory and in various areas of astrophysics The book starts by introducing the MHD equations certain useful approximations and the transition to turbulence The second part of the book covers incompressible MHD turbulence the macroscopic aspects connected with the different self organization processes the phenomenology of the turbulence spectra two point closure theory and intermittency The third considers two dimensional turbulence and compressible in particular supersonic turbulence Because of the similarities in the theoretical approach these chapters start with a brief account of the corresponding methods developed in

hydrodynamic turbulence The final part of the book is devoted to astrophysical applications turbulence in the solar wind in accretion disks and in the interstellar medium This book is suitable for graduate students and researchers working in turbulence theory plasma physics and astrophysics
