Hormone Action in Plant Development — A Critical Appraisal G. V. Hoar, J. R. Lenton, M. B. Jackson, 2013-10-22 **Hormone Action in Plant Development A Critical Appraisal** documents the proceedings of the Tenth Long Ashton Symposium September 1986 The symposium was convened to assess the evidence for and against the view that plant hormones are endogenous regulators of plant development The meeting also aimed to focus on and assess promising strategies for future research The symposium opened with the Douglas Wills Lecture given by Professor Carl Leopold In many respects progress in research on animal hormones seems greater than in the plant sciences and there may well be merit in following progress in animal hormone research as suggested by Professor Leopold The symposium was comprised of four sessions The

introductory session considered the coordinating role of hormones in plant growth and development and focused on hormone action at the molecular level including their binding to receptors and their control of gene expression The next two sessions embraced contributions on the experimental manipulation of development by genetic notably by biochemical mutants chemical for example with gibberellin biosynthesis inhibitors and environmental including drought stress means All these approaches consolidated the central importance of hormones in plant growth In the final session three speakers suggested some promising avenues for future research into the physiology biochemistry and molecular biology of plant hormones

Introduction to Ecological Biochemistry J. B. Harborne, 1993 Ecological biochemistry concerns the biochemistry of interactions between animals plants and the environment and includes such diverse subjects as plant adaptations to soil pollutants and the effects of plant toxins on herbivores The intriguing dependence of the Monarch butterfly on its host plants is chosen as an example of plant animal coevolution in action The ability to isolate trace amounts of a substance from plant tissues has led to a wealth of new research and the fourth edition of this well known text has consequently been extensively revised New sections have been provided on the cost of chemical defence and on the release of predator attracting volatiles from plants New information has been included on cyanogenesis the protective role of tannins in plants and the phenomenon of induced defence in plant leaves following herbivory Advanced level students and research workers alike will find much of value in this comprehensive text written by an acknowledged expert on this fascinating subject The book covers the biochemistry of interactions between animals plants and the environment and includes such diverse subjects as plant adaptations to soil pollutants and the effects of plant toxins on herbivores The intriguing dependence of the Monarch butterfly on its host plants is chosen as an example of plant animal coevolution in action New sections have been added on the cost of chemical defence and on the release of predators attracting volatiles from plants New information has been included on cyanogenesis the protective role of tannins in plants and the phenomenon of induced defence in plant leaves following herbivory
