infection and cervical anal and several other cancers are also carefully assessed Other data considered include findings from animal studies and investigations of the mechanisms by which immune dysfunction may contribute to the genesis of cancer On the basis of this evaluation the monograph concludes that infection with HIV 1 is carcinogenic to humans Infection with HIV 2 was classified as possibly carcinogenic to humans The second monograph provides a similarly detailed evaluation of human T cell lymphotropic viruses which are the only known human oncornavirinae Concerning studies of cancer in humans particular attention is given to evidence of an association between HTLV I and adult T cell leukemia lymphoma which occurs almost exclusively in areas where this infection is endemic In addition several case control studies have found an association between HTLV I seroprevalence and tumors of the vagina cervix and liver but confounding effects and bias could not be excluded The evaluation also considered findings from animal carcinogenicity studies and from investigations of the molecular mechanisms of leukemogenesis On the basis of this evaluation the monograph concludes that HTLV I is carcinogenic to humans HTLV II could not be classified as to its carcinogenicity to humans
