Creating Sound Vol :

Exploring Animal Behavior Through Sound: Volume 1 Christine Erbe, Jeanette A. Thomas, 2022-10-03 This open access book empowers its readers to explore the acoustic world of animals. By listening to the sounds of nature we can study animal behavior, distribution and demographics, their habitat characteristics and needs, and the effects of noise. Sound recording is an efficient and affordable tool independent of daylight and weather, and recorders may be left in place for many months at a time continuously collecting data on animals and their environment. This book builds the skills and knowledge necessary to collect and interpret acoustic data from terrestrial and marine environments. Beginning with a history of sound recording, the chapters provide an overview of off the shelf recording equipment and analysis tools including automated signal detectors and statistical methods, audiometric methods, acoustic terminology, quantities and units, sound propagation in air and under water, soundscapes of terrestrial and marine habitats, animal acoustic and vibrational communication, echolocation, and the effects of noise. This book will be useful to students and researchers of animal ecology who wish to add acoustics to their toolbox, as well as to environmental managers in industry and government.

Exploring Animal Behavior Through Sound: Volume 2 Christine Erbe, Jeanette A. Thomas, 2025-07-03 This open access book offers a profound exploration of the acoustic world of animals. Organized into nine chapters by taxonomy: invertebrates, insects, amphibians, reptiles, fishes, birds, and mammals, subterranean, terrestrial, and marine, it delves into sound production, sound reception, sound function, and the impacts of noise on these creatures. As the second volume of *Exploring Animal Behavior Through Sound*, it builds upon the bioacoustic concepts and methodologies established in the first volume. By attuning ourselves to the sounds of nature we can gain valuable insights into animal behavior, distribution and demographics, as well as their habitat characteristics and needs, and the effects of noise on their behavior. This book will serve as a valuable resource for students and researchers in animal ecology seeking to incorporate acoustics into their research toolkit, as well as for environmental managers in industry and government.

Sound and Space in Film David Roche, Antoine Gaudin, 2025-11-30 *Sound Space in Film: Craft, Aesthetics, Theory* brings together two expanding fields in contemporary film studies: soundtrack studies and studies of cinematic space. It takes stock of the interest in the craft and theory of sound space and soundscapes in artistic and academic circles by exploring the construction of sound space in a specific medium, film, from a variety of perspectives: artistic, technical, aesthetic, and discursive. Building on seminal works in sound studies and film studies, it examines both the sonic characteristics of space and the spatial dimensions of sound. It explores the sound of places or settings but considers more broadly the experience of cinematic space in aural and visual terms. It follows contemporary trends in film history and production studies that value the craft and discourses of sound technicians and draws on contemporary theoretical frameworks that emphasize the corporeality of experience and/or consider the environment from an ecocritical perspective as alive with sounds.
