**Animal Biotechnology** L.A. Babiuk,J.P. Phillips,Murray Moo-Young,2013-10-22 The advent of biotechnology has the potential to develop a variety of novel or better quality products for the treatment of a large number of diseases in livestock In addition as we understand more about the reproductive physiology of animals the potential exists to dramatically increase the productivity of animals through better therapeutics and diagnostics for the control of many infectious diseases Productivity can also be increased through animal breeding strategies including gene transfer micromanipulation of embryos and gamete sex selection As well as being a valuable reference to current knowledge in these areas this first supplement to Comprehensive Biotechnology also looks at societal concerns over the use of antibiotics and chemical residues in meat and milk products which are forcing biotechnologists to investigate more natural means of controlling infection by stimulating the animal s own immune system to combat infection The identification of a variety of cytokines which are involved in regulating immune responses provides opportunities to use the animal s natural defence mechanisms to combat many infections or increase the animal s resistance to such infections These approaches should provide tools for eventual elimination of specific diseases from counties regions or whole continents

*Animals as Biotechnology* Richard Twine, 2010 In *Animals as Biotechnology* sociologist Richard Twine places the question of human animal relations at the heart of sustainability and climate change debates The book is shaped by the emergence of two contradictory trends within our approach to nonhuman animals the biotechnological turn in animal sciences which aims to increase the efficiency and profitability of meat and dairy production and the emerging field of critical animal studies mostly in the humanities and social sciences which works to question the nature of our relations with other animals The first part of the book focuses on ethics examining critically the dominant paradigms of bioethics and power relations between human and non human The second part considers animal biotechnology and political economy examining commercialisation and regulation The final part of the book centres on discussions of sustainability limits and an examination of the prospects for animal ethics if biotechnology becomes part of the dominant agricultural paradigm Twine concludes by considering whether growing calls to reduce our consumption of meat dairy products in the face of climate change threats are in fact complicit with an anthropocentric understanding of sustainability and that what is needed is a more fundamental ethical and political questioning of relations and distinctions between humans animals and nature **Animal Biotechnology** June
