**Processes of Animal Memory (PLE: Memory)** Douglas Medin, William Roberts, Roger Davis, 2014-05-09 Originally published in 1976 this volume contains new and original contributions of the time addressed to a related set of ideas concerning processes of memory in animals The theme is that animals remember and that theories of animal learning must take this into account as well as the coding processes that have been assumed to be specific to human beings The focus of the book is on processes and some progress is reported in differentiating types of memory The emphasis in applying animal work to studies of human memory is made not in terms of paradigms but in terms of processes implicated via performance in a variety of tasks Also many of the chapters reflect the usefulness of applying a memory framework to a variety of nonmemory paradigms This work will be essential reading for all those interested in animal as well as human memory and provided the most up to date and broadest examination of animal memory processes at the time from both a theoretical and conceptual framework Theories of Animal Memory Donald F. Kendrick, Mark E. Rilling, M. Ray Denny, 2014-04-04 First published in 1986 This book is concerned with the transition of animal learning from a strict stimulus response S R approach to a more cognitive approach In response to noted past research that was guided by some perspective or theoretical framework based partly on a combination of research results and individual opinions about what animals can do This volume was thus conceived as a collection of chapters in which animal memory researchers could publicly state their opinions about animal memory with little concern for substantiating them with test data This volume is organized in three main sections of three chapters each The first section The Grand Approach is a collection of chapters with a meta theoretical perspective The second section Memory Processes presents three chapters concerned with the processes properties and mechanisms of short term memory in animals The third section Theoretical Issues presents two highly developed theories of animal memory one based on pigeon short term memory experiments and one based on delayed alternation in the rat Animal Memory Werner K. Honig, P. H. R. James, 2013-10-22 Animal Memory is based on the proceedings of a symposium held at Dalhousie University in the summer of 1969 Each of the seven chapters provide broad coverage of the topic with which it is concerned and the experimental work reported is representative of the most significant developments in the field The book includes two studies on associative memory the memory of one event which is essential to its association over a delay with subsequent events One study shows that animals can remember events from one learning trial to the next and that their behavior will be determined largely by the sequences of trials with differing outcomes the other presents research on the association of flavors with toxicosis in a conditioning paradigm Separate chapters deal with retentive memory the retention and forgetting of learned behavior over time and the physiological basis of memory in terms of consolidation theory These studies demonstrate that animals do forget and examine theories of forgetting The final chapter provides a critical discussion based on all of the foregoing material in which the topics covered in the book are related to current work on human retention and
