In this paper we study the existence of solutions to initial and boundary value problems of partial functional differential equations via a fixed-point analysis approach. Using the topological transversality theorem we derive conditions under which an initial or a boundary value problem has a solution.

Key words: Partial Functional Differential Equations, Initial Value Problems, Boundary Value Problems, Topological Transversality, *A Priori* Bounds.

AMS subject classifications: 35R10.

1. Introduction

In this paper we study initial and boundary value problems for a class of semilinear, abstract functional differential equations. This class is characterized by the fact that the associated homogeneous, linear differential equation generates a strongly continuous linear evolution system of compact operators.

More precisely, we consider the nonlinear Volterra integral equation

$$x(t) = W(t,)x(0) + \int_0^t W(t,s)f(s,x_s)ds, \, t \in [0,b] \tag{1.1}$$

together with an initial condition

$$x_0 = \varphi \tag{1.2}$$

or with a linear boundary condition

$$Lx = \alpha. \tag{1.3}$$

Our notations follow that of Hale [5] and Travis and Webb [12]. X denotes a Banach space. $C = C([-r, 0], X)$ is the Banach space of continuous X-valued functions with
