Alaskan Eskimo Snowshoes

To facilitate the bending of snowshoe frames the author has chosen this type of snowshoe for boys and novices. Snowshoes with this type of frame were used by Alaskan Eskimos and also by Chipewyan Indians.

By using green wood and bending it a little at a time the same result is obtained as by steaming. By using green saplings one is also usually sure of straight grained wood. Allowing the bent frames to dry out for a week in a dry place (near a stove or furnace) is sufficient.

1. First get the form or forms ready. Use a 2" x 10" plank 4' long and round off one end as shown in Fig. 1.

Cut 2 pieces of hardwood for the spreaders (Fig. 2) and fasten them to the plank. Fig. 3.

2. Now select 4 live elm or ash saplings measuring about 1 1/2" to 1 3/4" at the butt ends and about 4 or 4 1/2" long. While still fresh trim them square with a drawknife and a spokeshave, to 3/4" x 3/4" in the mid-section and tapering to 3/8" x 3/8" at the ends. Chamfer the edges.

3. There are several ways in which the front curves may be bent, two of which are shown here.

1st Method

Clamp in vise & drive wedge to spread it.

Then fit plank to vise as shown in Fig. 5, place a

prop under the other end and slowly bend both strips until they can be hooked under the first spreader. Then pull the tail ends together and clamp 6' from the end. Figs. 5 & 6.

Fig. 5.

Fig. 6.

2nd Method

If no large vise is handy, make a jig as shown in Fig. 7. Tie or clamp the front ends together and bend in same manner as in 1st Method. Allow a week to dry.

square hole large enough to receive ends.

Clamp Fig. 7.

4. Before taking frames from forms, mark the locations for the crosspieces (see large drawing). Cut the crosspieces of hardwood and fit them into mortises in frame, cut 1/4" to 3/8" deep.

FRONT CROSSPIECE REAR CROSSPIECE

5. Wrap front end tightly with wet rawhide, set crosspieces into mortises, pull tail ends together and wrap.

WEBBING

Eskimos use walrus hide and Indians use rawhide for webbing. The snowshoes shown in the upper left hand corner are webbed for crusted snow. If no rawhide is obtainable, use so-called rawhide belt-lacing, cut 1/2" wide for the ends and 3/4" wide for the middle section. Either type of webbing should be thoroughly soaked before using and put on while wet.

The detailed drawing shows the method of webbing. Lace the front & rear sections of the frame on paper & then lay out the webbing on the paper first. Do not pull rawhide too tight as it may pull the frame out of line when dry. Pull it moderately tight. About 12 feet of 1 1/2" lacing is used for the front and end, and about 6 feet for the tail end. About 25 feet of 3/4" is used for the middle. Be careful to weave over and under uniformly as shown. Webbing at ends is drawn thru 3/8" or 1/2" holes in frame & crosspieces. Numbers show order of procedure.

For the middle webbing start where indicated & go across & back twice, making 4 strands, then go under & over, & proceed in numerical order, fastening and fastening as shown at left. The darkened strand is then woven in, fastening when shown, and following the alphabetic order as indicated, finally fastening end at H.

Two methods of fastening at sides of center section.

The darkened strand may be dyed red or green, by putting aniline dye in the soaking water and will give the snowshoes an added bit of decoration.

When the rawhide has dried thoroughly give the frame & the webbing 2 or 3 coats of good spar varnish.

Note - The author suggests lacing with heavy cord first to see if everything will work out right. A change in the curve of the frame may mean a change in the webbing also. Make splices as shown.

End wrapping

Splice pulled up tight.
