**Descent of Man and Selection in Relation to Sex** Charles Darwin, 2004 Excerpt from *The Descent of Man and Selection in Relation to Sex* The nature of the following work will be best understood by a brief account of how it came to be written During many years I collected notes on the origin or descent of man without any intention of publishing on the subject but rather with the determination not to publish as I thought that I should thus only add to the prejudices against my views It seemed to me sufficient to indicate in the first edition of my *Origin of Species* that by this work light would be thrown on the origin of man and his history and this implies that man must be included with other organic beings in any general conclusion respecting his manner of appearance on this earth Now the case wears a wholly different aspect When a naturalist like Carl Vogt ventures to say in his address as President of the National Institution of Geneva *personne en Europe au moins n ose plus soutenir la creation ind pendante et de toutcs pieces des esp ees* it is manifest that at least a large number of naturalists must admit that species are the modified descendants of other species and this especially holds good with the younger and rising naturalists The greater number accept the agency of natural selection though some urge whether with justice the future must decide that I have greatly overrated its importance Of the older and honoured chiefs in natural science many unfortunately are still opposed to evolution in every form About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works *The Descent of Man* Charles Darwin, 1874 *The Descent of Man, and Selection in Relation to Sex* Charles Darwin, 1876

*Descent of Man* Charles Darwin, 2007-09 The sole object of this work is to consider firstly whether man like every other species is descended from some pre existing form secondly the manner of his development and thirdly the value of the differences between the so called races of man As I shall confine myself to these points it will not be necessary to describe in detail the differences between the several races an enormous subject which has been fully discussed in many valuable works

**The Descent of Man, and Selection in Relation to Sex** Charles Darwin M.A. F.R.S., 2012-03-01 WITH ILLUSTRATIONS secondly the manner of his development and thirdly the value of the differences between the so called races of man Darwin s approach to arguing for the evolution of human beings is to outline how similar human beings are to other animals He begins by using anatomical similarities focusing on body structure embryology and rudimentary organs that presumably were useful in one of man s pre existing forms He then moves on to argue for the similarity of mental characteristics Based on the work of his cousin Galton Darwin is able to assert that human character traits and mental

characteristics are inherited the same as physical characteristics and argues against the mind body distinction for the purposes of evolutionary theory From this Darwin then provides evidence for similar mental powers and characteristics in certain animals focusing especially on apes monkeys and dogs for his analogies for love cleverness religion kindness and altruism He concludes on this point that Nevertheless the difference in mind between man and the higher animals great as it is certainly is one of degree and not of kind He additionally turns to the behavior of savages to show how many aspects of Victorian England s society can be seen in more primitive forms **The Descent of Man** Charles Darwin,2015-01-01 The Descent of Man and Selection in Relation to Sex by Charles Darwin was first published in 1871 The Descent of Man and Selection in Relation to Sex is Darwin s second book on evolutionary theory In The Descent of Man Darwin applies theory to human evolution and details his theory of sexual selection The book discusses many related issues including evolutionary psychology evolutionary ethics differences between human races differences between human sexes and the relevance of the evolutionary theory to society The Descent of Man, and Selection in Relation to Sex Charles Darwin,2004-06 In the discussion on Sexual Selection in my Descent of Man no case interested and perplexed me so much as the brightly coloured hinder ends and adjoining parts of certain monkeys As these parts are more brightly coloured in one sex than the other and as they become more brilliant during the season of love I concluded that the colours had been gained as a sexual attraction

*The Descent of Man and Selection in Relation to Sex* Charles Darwin,2017-07-27 The Descent of Man and Selection in Relation to Sex Vol I is an unchanged high quality reprint of the original edition of 1872 Hansebooks is editor of the literature on different topic areas such as research and science travel and expeditions cooking and nutrition medicine and other genres As a publisher we focus on the preservation of historical literature Many works of historical writers and scientists are available today as antiques only Hansebooks newly publishes these books and contributes to the preservation of literature which has become rare and historical knowledge for the future *The Descent of Man* Charles Darwin,2016-01-04 The Descent of Man Selection in Relation to Sex Charles Darwin The Descent of Man and Selection in Relation to Sex is a book by English naturalist Charles Darwin first published in 1871 which applies evolutionary theory to human evolution and details his theory of sexual selection a form of biological adaptation distinct from yet interconnected with natural selection The book discusses many related issues including evolutionary psychology evolutionary ethics differences between human races differences between sexes the dominant role of women in mate choice and the relevance of the evolutionary theory to society THE NATURE of the following work will be best understood by a brief account of how it came to be written During many years I collected notes on the origin or descent of man without any intention of publishing on the subject but rather with the determination not to publish as I thought that I should thus only add to the prejudices against my views It seemed to me sufficient to indicate in the first edition of my Origin of Species that by this work light would be thrown on the origin of man and his history and this implies that man must be included with other organic beings in any general conclusion respecting his

manner of appearance on this earth Now the case wears a wholly different aspect When a naturalist like Carl Vogt ventures to say in his address as President of the National Institution of Geneva 1869 *personne en Europe au moins n ose plus soutenir la creation independante et de toutes pieces des especes* it is manifest that at least a large number of naturalists must admit that species are the modified descendants of other species and this especially holds good with the younger and rising naturalists The greater number accept the agency of natural selection though some urge whether with justice the future must decide that I have greatly overrated its importance Of the older and honoured chiefs in natural science many unfortunately are still opposed to evolution in every form Includes Principles of Sexual Selection Secondary Sexual Characters in the Lower Classes of the Animal Kingdom Secondary Sexual Characters of Insects Insects Continued Order Lepidoptera Secondary Sexual Characters of Fishes Amphibians and Reptiles Secondary Sexual Characters of Birds Birds Continued Birds Continued Birds Concluded Secondary Sexual Characters of Mammals Secondary Sexual Characters of Mammals Continued Plus more

second landmark work on evolutionary theory following *The Origin of the Species* marked a turning point in the history of science with its modern vision of human nature as the product of evolution Darwin argued that the noblest features of humans such as language and morality were the result of the same natural processes that produced iris petals and scorpion tails It was Darwin's second book on evolutionary theory following his 1859 work *On the Origin of Species* in which he explored the concept of natural selection In *The Descent of Man* Darwin applies evolutionary theory to human evolution and details his theory of sexual selection a form of biological adaptation distinct from yet interconnected with natural selection The book discusses many related issues including evolutionary psychology evolutionary ethics differences between human races differences between sexes the dominant role of women in choosing mating partners and the relevance of the evolutionary theory to society

**The Descent of Man** Charles Darwin, 2026-04-21 The first annotated edition of the book that shocked the Victorian world and continues to generate controversy today When Charles Darwin's *The Descent of Man* was published in 1871 the book was an immediate sensation It presents Darwin's account of how we evolved from primates and expounds his theory of sexual selection which he believed accounted for human origins and diversity James Costa and Elizabeth Yale bring Darwin's *Descent* to new life in this authoritative annotated edition shedding light on the cultural context in which the legendary naturalist developed his ideas and exploring how subsequent generations of scientists scholars and social reformers adapted them Informative and in depth commentaries accompany the text of *The Descent of Man* enabling readers to engage with Darwin's ideas and contextualize them in light of our current understanding of human evolution and sexual selection Costa and Yale show how Darwin's antislavery commitments and his beliefs in European superiority shaped his account of the evolution of human difference and examine how Victorian beliefs about gender informed the development of his theory of sexual selection They explain where Darwin's arguments about the origins of human differences line up with modern science and where they don't Spanning the boundaries of history and science this fully annotated edition illuminates the rich cultural and scientific contexts underpinning Darwin's ideas and introduces his landmark book to a new generation of readers

**The Descent of Man** Charles Darwin, 2013-10-03 In *The Descent of Man* Darwin addresses many of the issues raised by his notorious *Origin of Species* finding in the traits and instincts of animals the origins of the mental abilities of humans of language of our social structures and our moral capacities he attempts to show that there is no clear dividing line between animals and humans Most importantly he accounts for what Victorians called the races of mankind by means of what he calls sexual selection This book presents a full explanation of Darwin's ideas about sexual selection including his belief that many important characteristics of human beings and animals have emerged in response to competition for mates This was a controversial work Yet Darwin tried hard to avoid being branded as a radical revolutionary He is steeped in Victorian sensibilities regarding gender and cultural differences he sees human civilization as a move from barbarous savagery to modern gentleness and women as more emotional and less intellectual than men thus providing a biological basis for the social assumptions and prejudices of the day *The Descent of Man* played a major role in the emergence of social Darwinism This complete version of the first edition gives the modern reader an unparalleled opportunity to engage directly with Darwin's proposals launched in the midst of continuing controversy over *On the Origin of Species* Janet Browne is the author of the prize winning biography *Charles Darwin: Voyaging* and *Charles Darwin: The Power of Place*
